PAPER - 3 OF 1981

A SPECIAL PAPER ON SCHEDULED CASTES & SCHEDULED TRIBES

GOA, DAMAN & DIU

# PREFACE

It is for the first time that separate Primary Census Abstract (PCA)—have been prepared for the Scheduled Caste and Scheduled Tribe population under the 1981 census, just on the lines of the PCA usually presented for the general population. These special PCA will also be published in the District Census Handbook of this territory. But since there is a pressing demand for census data on the SC/ST communities, especially in the context of the revised 20-point programme, this mimeograph booklet is brought out for the immediate use of the planners and administrators concerned with the development programmes. The SC/ST PCA are presented for the levels of territory, district, taluka and town only.

Panaji,

August 12, 1982

S.K.GANDHE
Director of Census Operations,
Goa, Daman & Diu.

# Introductory Note

The provisional results of the 1981 census were released in March 1981, i.e. immediately after the enumeration of the population was over, as Paper 1 of 1981. Subsequently, in May, 1981, another paper called Supplement to Paper 1 of 1981 was issued. Simultaneously, a Regional Tabulation Office was set up for scrutiny of census schedules and preparation of the final population totals for different area units. This work was completed in February, 1982, and a paper called Final Population Figures of Goa, Daman & Diu, 1981 Census" was released as Paper-2 of 1981, in June, 1982. The present publication (numbered Paper-3 of 1981) inta Special Paper on the Scheduled Caste and the Scheduled Tribe population of this territory. In fact this paper presents the Primary Census Abstract (PCA) separately for the SC population and the ST population. The PCA provides data on the total number of households, population, literate persons, main workers classified by cultivators, agricultural labourers, workers in household industry and other workers; marginal workers and non-workers. All these details are provided for the total SC/ST population as well as for the rural and urban components. Furthermore, the details are broken down by males and females also. The SC/ST PCAs are presented for the levels of union territory, district, taluka and urban town only. However, in respect of urban agglomerations, the data are presented for the constituent outgrowths also. These PCAs would be included in the District Census Handbook of this territory, printing of which is likely to take about a year. However, in order to meet the urgent need of the data users concerned with the welfare of the scheduled castes and scheduled tribes and those engaged in the relevant administrative works, this paper is being brought out as a Special Paper. This is the first time that a special PCA has been prepared separately for SC/ST on the lines of the P.C.A. for the general population.

## Definition of Scheduled Castes and Scheduled Tribes:

According to the definition of the scheduled castes and the scheduled tribes given in the Constitution of India, the term 'Scheduled Castes' refers to such castes, races, tribes or parts of or groups within such castes, races or tribes as are declared to be Scheduled Castes by the President of India under Article 341 of the Constitution of India. The term 'Scheduled Tribes' means such tribes or tribal communities as are declared to be Scheduled Tribes by the President of India under Article 342 of the Constitution.

By the President's order (No.DF.1.SCT.64 dated 19/2/68) under the above Articles of the Constitution, certain castes and communities have been declared as scheduled castes and scheduled tribes for the union territory of Goa, Daman & Diu. The same are as under:-

## LISTS OF SCHEDULED CASTES

It may be mentioned here that the scheduled castes can belong to the Hindu or the Sikh religion, while the scheduled tribes can belong to any religion.

## Population:

The following statement gives an idea of the share of SC/ST households and population in the total households and population of the territory and its districts.

Statement-1

General population, Scheduled Castes/Scheduled Tribes households, population and their percentage by sex.

There were 4893 SC and 2093 ST households in the territory in 1981 which respectively accounted for 2.33 and 0.39 per cent of the total households. The population of SC and ST was 13,432 and 10,721 as against the total population 10,86,730. Thus, the proportion of SC and ST was to the total population worked out to 2.16 per cent, while that of ST to 0.93 per cent. The corresponding proportions in 1971 were 1.93 per cent and 0.89 per cent. At the district level, a higher concentration of ST was noticed in Daman being 20 per cent of the district's total population. The SC population was more or less equally distributed in all the three districts.

Studying the decennial growth of the SC/ST population, it was a revelation to find that both bad registered growth rates which were considerably higher than the territory's decennial growth rate for the whole population. The SC growth rate was 41.89 per cent and the ST rate was 40.07 per cent, which were each almost one and a half times higher than the territory's growth rate, 25.69 per cent, during the decade 1971-81. In absolute terms, the

SC population went up from 16514 in 1971 to 23432 in 1981, a net increase of 6918. The net increase in the population of or was 3067 during the same period.

Break-down of the SC population by the talukas of Goa reveals that Pernem leads the rest with 4.04 per cent of its population made up of SC, followed by Bardez (2.94 per cent), Bicholim (2.72 per cent), Mormugao (2.64 per cent), Satari (2.32 per cent), and Sanguem (2.02 per cent). The distribution of ST population was highly skewed as Daman alone accounted for as high as 91.67 per cent of the territory's total ST population. Share of ST population in other talukas was negligible. While the SC population was found in almost all the towns, no ST population was found in as many as eight towns of the territory.

The average household size (total population divided by the number of households) for the total population of the territory comes to 5.16 persons which is about normal for the country. Amongst the ST, the average household size is 5.12 persons which too can be considered normal. However, the average SC household size comes to only 4.79 which is somewhat intriguing in that the general impression is that the SC household, comprises of larger number of persons. A more full and deep probing is necessary to surface the reasons for the smaller average size of SC household in this territory.

## Literacy:

The following statement shows the position of literacy among the SC and ST population as compared to the general population.

Statement-2

Literacy rates among Scheduled Castes/Scheduled Tribes and General population by sex.

U.T./District	Tota	l Popula	tion		uled Cas ation	te		duled Trib lation	9€			
	P	M	F	P	M	M F P M						
The fact of the second space of the second s	2	3	4	5	6	7	88	9	10			
GOA, DAMAN & DIU	56.66	65.59	47.56	38 <b>.3</b> 8	48 <b>.7</b> 9	27.84	26.48	33.65	18.89			
District Goal	57.25	65.39	48.29	36.19	46.58	25.32	28.55	37.97	17.41			
District Deman	52.05 44.53	62.74 56.19	41.55 34.29	61.40 44.02	70.50 63.82	55.01 25.52	26.32 27.09	33.66 22.22	18.74 38.98			

The literacy rate of the population of an area is the ratio (percentage) of the literate persons to the total population of the area. For deriving the literacy rates given in this statement, the children in the age-group 0-4 are also included in the total population and hence, the rates are really the 'Iride' literacy rates.

It may be seen that 38.38 per cent of SC and 26.48 per cent of ST population were literate. Obviously the progress of literacy was very low among these two communities when compared to the literacy rate of 56.66 per cent for the general population. The literacy rates by sex show rather significant variations especially among the scheduled tribes. Only 18.89 per cent of ST females are literate, as against 27.84 per cent of SC and 47.56 per cent of total population in the territory. The literacy by districts shows that Daman and Diu were in a better position than Goa as far as the literacy among the scheduled castes was concerned. It is particularly interesting to note that the literacy among the scheduled castes in Daman district was the highest being 61.40 per cent, being even more than the literacy rate for the total population of that district (52.05 per cent) or even the total population of the territory (56.66 per cent). However, numerically the SC population in Daman is very meagre being only 1684, against the SC population of 23432 (about 15 times more than Daman) of the territory. The overall low literacy rate for the total SC population of the territory only highlights the need for raising the literacy standard among the SC population of Goa.

## CONJECT OF WORKER 1961-1981:

Relatively more detailed information regarding economic activity of the population was collected in the 1981 census. The 'work' concept of 1961 and 1971 censuses, as opposed to the 'income' or 'economic independence' concept of the censuses prior to 1961, was however, retained in the 1981 census also. But the criterion for classification of persons as workers underwent changes. While in 1961 and 1971 censuses different approaches, viz. usual status and current status, were adopted with a reference period of one year and one week for seasonal and regular work respectively, at the 1981 census the usual status approach was adopted uniformly for all work. In the 1961 and 1971 censuses, classification as worker or non-worker was made through different criteria. In 1961 a person was qualified as a worker if he had worked regularly during the last season or if he had worked at least for a day in regular (non-seasonal) work during the preceding fortnight. At the 1971 census a person was treated as a worker only if he spent his time mainly in work or if he worked at least for a day in regular (non-seasonal) work during the preceding week.

The dichotomy of worker and non-worker of 1961 and 1971 censuses was given up at the 1981 census and instead a trichotomy as main worker, marginal worker and non-worker was adopted. For main worker the time criterion of engagement in work was the major part of the year i.e. at least 183 days in the preceding one year, while those who worked for some time during the last year but not for the major part of the year were treated as marginal workers. Those who had never worked during the last one year were considered as non-workers. This trichotomy partially permitted a comparability of 1981 census economic data with that of 1971 as well as 1961. It is expected that the term main worker of 1981 would correspond to the worker of 1971 and the main worker and marginal worker together of 1981 would correspond to the worker of 1961.

### Work participation:

The statement below shows the work participation rates among the SC and ST population in comparison with the general population.

### Statement-3

Work participation rates among the Scheduled Castes/Scheduled Tribes and general population by sex in the Union Territory and its districts.

U.T./District	riar filir via filir izan azatur et	Work	participa	tion rates	s (main	workers)			
0.147 -2000	lota	l Popula	tion		duled Ca Lation	ste		duled I lation	ribe
·	P	M	F	P	M	F	P	M	F
	2 .	3	4	5	6	7	8	9	10
GOA, DAMAN & DIU	30.59	45.85	15.04	34.81	48.09	21.37	38.86	52.67	24.25
District Goa	30.89	46.06	15.33	36.93	49.86	23.41	50.72	63.10	36.08
District Daman	28.04	. 44.85	11.52	18.05	31.08	8.90	37.58	51.02	23.69
District Div	24.98	40.11	11.69	20.99	35.64	7.08	60.59	82.64	6.78

The work participation rate is the ratio (percentage) of workers to the total population of an area.

It could be seen from the above statement that the work participation rate was the highest among the scheduled tribes, being 38.86 per cent. Even the scheduled castes had a higher work participation rate (34.81) than that of the general population (30.59). The same trend was observed in 1971 also when the work participation rate among the scheduled tribes was 40.99 per cent, among the scheduled castes 35.71 per cent, and for the general population 31.67 per cent.

At the district level also, the work participation rate was the highest among the scheduled tribes. In the district of Diu, the ST work participation was recorded as 60.59 per cent followed by Goa with 50.72 per cent. However, it may be mentioned here that these two districts accounted for only 1.39 and 6.44 per cent respectively of the territory's total scheduled tribe population. The district of Daman which accounted for 91.67 per cent of total ST population had recorded the ST work participation of only 37.58 per cent. The work participation rate among the scheduled castes was higher (36.93 per cent) than that of general population in Goa district (30.39 per cent), whereas in the districts of Daman and Diu it was lower than that of the general population. Sex-wise distribution of workers also revealed that a larger proportion of females of the SC/ST communities had to work and supplement the household incomes. About 24.25 per cent of ST and 21.37 per cent of the SC females had to undertake economic activity as against only 15.04 per cent for the females among the total population. This, if at all, was an indirect indication of the fact that a larger work-participation rate was an economic compulsion not only for the males but also for the females of the SC/ST communities.

The following statement gives percentage distribution of workers by broad categories for the total workers as well as those belonging to the scheduled castes and scheduled tribes.

Statement-4
Distribution (Percentage) of workers

Potal workers/ SC and ST workers	Perce	ntage of work	cers engaged	in
go and or agreers	C	AL	HHI	OW
Notal workers	18,82	9.74	3.41	69.03
Scheduled Costes workers	4.00	10.39	22,20	63.41
Service of the services workers	11.16	.32.14	5.79	50.91

The above table brings out some important salient features of the distribution of work-force amongst the scheduled communities. For example, more than 32 per cent of the ST workers were engaged in wage labour in agriculture which is known to be a low paid occupation. Amongst the SC more than 22 per cent were engaged in what is grouped as 'household industry work' which in our territory relates to low-paid jobs like basketweaving, other bamboo works shoe making and shoe repair, etc. The proportion of total workers (i.e. all workers including SC/ST workers) engaged in agriculture labour and HHI was only 10 per cent and 3 per cent respectively. On the other hand, 19 per cent of the total workers were engaged in cultivation, while this proportion amongst the SC workers was only 4 per cent and amongst ST it was 11 per cent. If we consider agricultural labour and household industry as occupations which provide relatively low returns, we find that 38 per cent of ST workers and 33 per cent of SC workers were engaged in these low paid occupations. As against this, amongst the total workers, only 13 per cent were engaged in these occupations.

Another significant fact revealed by the above table is that unlike in the rest of the country, agriculture (cultivation plus agricultural labour) forms a relatively minor occupation in this territory in the sense that it provides employment to only about 29 per cent of the labour force here as against about 70 per cent for the rest of the country. A major part of the labour-force of this territory including the labour-force belonging to the SC and ST communities is engaged in what is called as 'other work', that is in occupations other than cultivation, agriculture labour and HHI. While further detailed break-down of the group of 'other workers' by various constituent occupations is not yet available, it is believed that a major part thereof is engaged in the tertiary sector of the economy. This is also a special feature of this territory.

### General limitations of data on SC/ST:

Before concluding this brief analytical note, it is important to point out the limitations of the data on scheduled castes and scheduled tribes collected in the census Firstly, there is an area restriction i.e. the President's order specifies certain castes and tribes as scheduled castes or scheduled tribes for a particular area. For example, if a person whose caste is declared as a scheduled caste in area A but not so declared in area B, moves from area A to area B, and is enumerated there, he will not be considered as belonging to a scheduled caste in area B though he would have been so considered had he been enumerated in area A. Secondly, two persons may be following identical occupation in their respective area and may be socially classified identically, yet one person may be enumerated as belonging to a scheduled caste in one area while the other residing in another area may not be so enumerated. For example a "Chambhar" of Goa, Daman & Diu and a "Mochi" of Gujarat may be performing identical functions say shoe-making or shoe repairing in their respective area.

But if a "Mochi' comes to Woa, Daman & Diu and is enumerated here, he will not be treated as belonging to a scheduled caste since the President's order for Goa, Daman & Diu does not specify the caste "Mochi" as a scheduled caste. These limitations have to be borne in mind while using the census data on scheduled castes and scheduled tribes.
