## P R E F A C E

The Punch district after its bifurcation in 1967 on administrative grounds into two districts, Punch and Rajauri, is now the smallest district of the State consisting of two tehsils Haveli and Mendhar commanding an area of 1,658 square kms. only. It falls between 33°—25' to 34°—0' North Latitude and 73°—58' to 74°—33' East Longitude. Barring a few low-lying valleys, the whole of the district is criss-crossed by mountain ranges, some soaring to over 10,000 ft. On the north and north-east are situated Baramula and Srinagar districts of the Kashmir valley. On its west and north-west falls the area presently under the illegal occupation of Pakistan.

Owing to its mountainous terrain, the district offers limited scope for cultivation. Its chief river, Punch, more like a mountain torrent, rather than helping to meet the irrigational needs of the district, causes considerable erosion of the paltry cultivable areas situated on its banks. However, since the district belongs to the 'dark green belt,' it receives an annual rainfall of over 1270 mms which compensates, to a large extent, the scanty irrigational facilities available in the district. Because of this, dry and terraced farming becomes possible at higher altitudes during the rainy season.

The headquarters of the district, Punch town, is situated at a fairly long distance—246 and 537 kms. respectively—from Jammu and Srinagar.

Its isolation and limited area which can be put to use for cultivation coupled with the fact that it lies in close proximity to the firing range from Pakistan, are some of the factors contributing to the district's general backwardness in the social and economic fields. The data of the 1971 Census

shows that among the 10 districts comprising Jammu & Kashmir it recorded the lowest growth rate viz ; 10.52% during the decade 1961-71 though in returning the sex-ratio it claimed 903 females per 1,000 males being placed in a better position in this respect than valley districts of Anantnag, Srinagar and Baramula. With the exception of Baramula and Doda, it recorded the lowest urban growth viz ; 35.38 despite the fact that one more place, Surankote, had been notified a town in 1970. It returned only 47,433 persons classifiable as workers out of a total population of 170,787 out of whom 13.82% the lowest figure amongst all the districts, became entitled to be placed in the category of 'other workers' showing that opportunities of diversification of occupations do not exist to the same extent in Punch as in other districts. However, it is worthy of mention that in the sphere of literacy on the basis of 1971 returns, the district was shown to be doing better with its literacy rate standing at 14.62% than Baramula (13.16%), Ladakh (12.70%), Doda (13.88%) and Rajauri (14.43%).

It is difficult to say what concrete steps could be taken to improve the economy of the district as it is presently constituted. But the suggestion to connect it by a road with the valley of Kashmir through the Gulmarg range may be well worth exploring. The road, if constructed, would not only help in breaking its present isolation but help in bringing about general political and economic stability to the district.

In compiling this handbook, it gives me pleasure to record my appreciation of the labour put in by S/Shri A. M. Kalloo, Tabulation Officer and P. K. Khosa, Statistical Assistant.

Srinagar,  
the 20th August, 1974.

J. N. ZUTSHI

PART X-A  
TOWN AND VILLAGE  
DIRECTORY

## INTRODUCTORY NOTE ON TOWN AND VILLAGE DIRECTORY

### **Origin and growth of District Census Handbooks.**

The District Census Handbooks were published for the first time in 1951 as part of the Census publication programme in almost all states of India except Jammu and Kashmir where due to unsettled conditions prevailing in the wake of Pakistani invasion of 1947-48 no census could be undertaken and no data was collected for the decade 1941-51. Even prior to 1951, some states used to produce District Census Statistics. No attempt of the kind appears to have been made in Jammu & Kashmir in an uninterrupted manner. The usual practice prevailing was to publish the population figures on the basis of communities and adding other details in the two parts of the General Report. From 1951 onwards information provided in the Primary Census Abstract was built up on 8 livelihood classes. The series of District Census Handbooks taken up for the first time at the 1951 Census fulfilled a long-felt need. These gave out not only the data contained in P.C.A. according to the new classification but included a succinct account of the district and its people, census tables and a host of other data covering such topics as housing, communication, education, public health etc., regarding each town and village of the district. At the 1961 Census, a uniform frame was adopted adding a lot more useful information in the volumes which were besides supplemented with maps, tables etc.

### **Scope of 1971 District Census Handbooks :**

Further improvements have been effected to the series at this Census not only by way of enlarging their scope and content but presenting the data in three parts A, B & C, with parts A & B consisting of Town & Village Directories and P.C.A. respectively fused into one volume. This departure in the earlier method of presentation is intended to eliminate delay and make readily available information reach the data-users in advance of Part C of series containing administrative statistics etc., the collection of which is bound to take time. Let us make a brief mention of the scope of each part :-

#### **Part A : Town & Village Directory :**

It furnishes information about each town and

village of the district. The Town Directory covers such items as status of civic administration, growth of population since 1901, functional characteristics of the towns at the 1961 and 1971 Censuses, physical aspects and location, civic finances, civic and other amenities, medical, educational, recreational and cultural facilities, trade, industry, commerce and banking facilities and distribution of population by religion.

The Village Directory portion gives particulars of amenities available in each village of the district in the matter of educational and medical institutions ; power supply ; drinking water ; post and telegraph facilities ; communication ; particulars of land use statistics and places of religious, historical and archaeological importance in the village.

#### **Part B : Primary Census Abstract :**

This part of the publication is exclusively based on 1971 Census data. It provides information in respect of each village and ward/mohalla of a town in the district in respect of its area ; number of residential houses ; number of households ; total population with sex-wise break up ; scheduled caste population ; literate and educated persons and working population by nine industrial categories and non-working population.

#### **Part C : Administrative Statistics & Report :**

This part of the District Census Handbook which will come out as a separate volume will incorporate administrative statistics and census tables. An analytical report indicating the socio-economic and demographic changes the district has experienced during the last decade.

#### **Explanatory Note on Town Directory Statements :**

The Town Directory, which forms one of the main parts of the publication, gives for each town the various amenities to highlight the socio-economic, cultural and demographic characteristics available in the urban part of the district. The Directory consists of seven main statements.

Before explaining the data contained in the statements, it would be in the fitness of things to lay down the census concept of a town :

According to the definition of town as adopted at the 1971 Census, the following were to be treated as "Urban" :-

- a) All places with a Municipality, Corporation or Town Committee or Notified Area or a Cantonment Board irrespective of their population and other characteristics.
- b) All other places satisfying the following tests :-
  1. An area/village having a minimum population of 5,000,
  2. An area/village having  $\frac{3}{4}$ th of its male working population as non-agriculturists, and
  3. An area having a density of not less than 1,000 persons per sq. mile (390 persons per Km<sup>2</sup>).

The urban part of Punch district comprises of two towns, namely Punch and Surankote. While both fulfil condition (a), neither of them satisfies the 3 criteria laid down at (b). With the transfer of its 2 towns namely Rajauri and Nowshehra to the newly carved out district of Rajauri during the inter-censal period the number of its towns has gone down from 3 to 1 excluding Surankote which was notified as a town in 1970.

Of the two towns, Punch with a population of 11,981 persons continues to be a class IV town and Surankote with its population below 5,000 is a class VI town.

#### Data Content :

A broad analysis of the data incorporated in the 7 statements of Town Directory is attempted in the following pages.

#### STATEMENT—I

This statement gives information on civic administration status as in 1970, growth history of towns from 1901 to 1971 and functional characteristics of towns as at 1961 and 1971 Censuses.

The following abbreviations have been used in Col. 5 of the statement to reflect the administration status of a town :

<i>Status</i>	<i>Abbreviation</i>
Town Area Committee	T.A.
Notified Area Committee	N.A.

As will be seen from Cols. 6-13 of the statement, Punch was first notified in 1911 and continues

to enjoy this status till-to-date. Surankote town, on the other hand, came into being only in 1970.

Another interesting point worth notice is that between 1961-71 the urban population of the district has increased by 3,607 persons. This means a decennial growth rate of 35.38% which though substantially high is still lower than the urban growth rate of 44.65% returned for the state as a whole.

#### Functional Category :

The functional classification of towns as portrayed under Cols. 14 & 15 of the statement is very useful for administrative agencies in finding out functional importance of towns in such fields as commerce, industry, transport, administration etc.

For determining the functional traits of a town the nine Industrial Categories have been condensed into the following five broad groups :-

<i>Group</i>	<i>Categories</i>
1. Primary Activities	I. Cultivation II. Agricultural labour III. Live-stock, Forestry, Fishing, Hunting, Plantations, Orchards and allied activities IV. Mining & Quarrying
2. Industry	V. Manufacturing, Processing, Servicing & Repairs a) Household Industry b) Other than Household Industry VI. Construction
3. Trade & Commerce	VII. Trade & Commerce
4. Transport	VIII. Transport, Storage & Communications
5. Services	IX. Other Services

If the proportion of workers under any of the above five classes is 40% or more, the town has been treated as mono-functional e. g. Industrial, Transport, etc.

If the proportion, on the other hand, under any of the above categories is less than 40% but when combined with the next predominant category comes to 60% or more, the town has been treated as bi-functional e.g, Industry-cum-Transport, Primary Activities-cum-Services etc.

Similarly, if the percentage of 3 most predominant categories turns out to be 60% or more, the town has been designated as tri-functional like Primary Activities-cum-Services-cum-Trade and Commerce etc.

Statement I further shows that Punch was a mono-functional town both at the 1961 and 1971 Censuses thereby implying that even the passage of a decade has not brought any diversification in the functional traits of the town.

Surankote which was declared urban only in 1970, is also a mono-functional town with more than 52% of its working population still engaged in the primary sector of activities.

#### **STATEMENT—II**

This statement gives the physical as well as locational aspects of towns of the district. Under physical aspects data on annual rainfall (in mms.) and maximum and minimum temperature (in centigrade) have been highlighted. The statement under location gives information on distance of the town from the nearest city with a population of one lakh and above ; distance from the State, District and Tehsil headquarters, from the Railway Station and bus route. It also provides information on the existence of river/canal, if any, within 10 kms. and Sea-Port, if, within 50 kms. from the town.

The particulars regarding annual rainfall, maximum and minimum temperatures have been obtained from the respective Town/Notified Area Committees. The distances indicated in the statement are approximate ones.

The district is located between 33°—25' to 34°—0' north latitude and 73°—58' to 74°—33' east longitude. The district is bounded in the north and north-east by the districts of Baramula and Srinagar and in the east, south and south-east by Anantnag and Rajauri districts respectively. On its west and north-west falls the area under illegal occupation of Pakistan.

The district falls in the natural division of

“Outer Hills”. Barring a few low lying valleys, the whole of the district is criss-crossed by mountain ranges, of which some even soar to over 10,000 ft. Owing to its mountainous terrain, very little land is available for cultivation. At higher altitudes mostly dry and terraced farming has to be resorted to.

Punch, the chief river of the district after meandering through narrow valleys flows over to the areas now under illegal occupation of Pakistan where it meets the river Jhelum. Wherever possible, this river is exploited for irrigational purposes. It deserves to be mentioned here that owing to the topographical hazards, over 90% of cultivation in the district is dependent on rainfall.

The climate in the district varies from place to place depending on altitude and aspect. Areas on higher elevation experience cool temperature in winter and temperate climate in summer. All low lying areas, on the other hand, are hotter in summer and pleasant in winter.

The district belongs to the “dark green belt” and, therefore, receives on an average a rainfall of over 1270 mms. The normal rainfall is quite fair and, therefore, compensates to a large extent the scanty irrigational facilities available in the district.

Both Jammu and Srinagar, the respective winter and summer capitals of State Government are situated at a fairly long distance from Punch—the headquarter town of the district. The former is approximately 246 kms. and the latter 537 kms. from the headquarter of the district.

Until recently Pathankote was the nearest Railway Station for all the towns of the district. With the extension of the railway line upto Jammu, the position has altogether changed. Jammu now forms the nearest Railway Station for all the towns of the district. Both the towns of the district enjoy bus route facilities. Neither a navigable river nor a canal falls within the specified range from the two towns of the district.

#### **STATEMENT—III**

This statement provides the budgetary statistics pertaining to the financial year 1968-69 in respect of either town of the district. The statement has been apportioned into the receipt and expenditure heads. Under the receipt head information has been given on such items as receipt through

taxes etc., receipt derived from Municipal properties; Government grants; loans; advances and other sources. Expenditure head shows outlays on general administration; public safety, public health and conveniences; public works; public institutions and others.

As already mentioned, Surankote, a class VI town of the district, came into being in 1970 and as such the requisite budgetary details are not available for this town.

It is interesting to note that per capita receipt in Punch town is Rs. 16.58 as against the per capita outlay of Rs. 6.53. While per capita outlay on public health and convenience is Rs. 3.38, there is no expenditure on public institutions. The receipt head includes a loan of Rs. 1,40,000 from the State Government. The following statement may be studied :—

**TABLE NO. 1**  
**Per capita receipt and expenditure by size class of towns**

Sl.No.	Size class of towns	No. of towns	Receipt (Rs.)			Expenditure (Rs.)			
			Total receipt	Receipt through taxes	Receipt from all other sources	Total expenditure	Expenditure on public health and convenience	Expenditure on public institutions	Expenditure on all other aspects
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1.	IV(10,000-19,999)	1	16.58	4.89	11.69	6.53	3.38	..	3.15
2.	VI(Below 5,000)	1	(Came into existence after 1970)						

#### STATEMENT—IV

This statement depicts civic and other amenities available in the two towns of the district and gives information on such items as length of the road in the town exclusively maintained by the respective local bodies; system of sewerage/drainage; number and type of latrines; method and disposal of night-soil; source and capacity of drinking water and fire-fighting facilities. The statement also gives information on the pattern of electricity consumed in the towns and indicates the number of connections under sub-heads like domestic, industrial, commercial, road lighting and others.

The information regarding the number of electric connections has been supplied by the respective local bodies.

A number of abbreviations has been used in the statement. These are amplified below :—

<i>Column 4</i>	
PD	— Pucca Drainage
KD	— Kutcha Drainage
<i>Column 8</i>	
WB	— Wheel Barrow
H	— Hand-cart
DS	— Dumping System
<i>Column 9</i>	
W	— Well
S	— Spring

#### Roads :

As per available information, the urban part of the district claims a total road length of 17 kms., of which Punch town alone accounts for 10 kms. It may not be out of place to mention here that the road distances indicated in the statement refer to those as are exclusively maintained by the local bodies. The statement, in fact, lacks the classification of roads into pucca, kutcha etc. as the relevant details are not available with the concerned local bodies.

#### Drainage System :

There are no underground sewers in any of the towns of the district. The draining system in prevalence consists of pucca as well as kutcha drains.

#### Sanitation :

As is the case with most of the districts of the state, sanitation is poor in Punch district also. There are no water-borne latrines available in either town of the district. Of the 7 service type latrines, 6 are found in Punch town.

The instruments most commonly used for the removal of night-soil consist of wheel-barrow and hand-carts. The garbage is removed beyond urban limits where it is dumped in deep dug ditches.

### Water Supply :

Both the towns of the district are provided with protected drinking water facilities. Considering the standard norm of consumption in an urban area, the existing facilities appear to be inadequate. As against a total requirement of about 3,59,000 gallons per day in Punch and 54,600 gallons per day in Surankote, the existing capacity of the reservoirs is 1,45,000 gallons and 20,000 gallons respectively.

### Fire-fighting Facilities :

As per available information, fire-fighting facility is available in Punch town only. Surankote is yet to acquire this facility.

### Electricity :

Both towns of the district are electrified. By 1969, a total of 1,167 electric connections stood issued, of which Punch town alone claimed over 94%. The classification of electric connections in terms of domestic, industrial, commercial, road-lighting and others, however, shows that availability and use of power is still too meagre to play any role in the economic activity of the two towns. The road lighting is provided by the local bodies. There are, all told, 85 public points, of which 81 points exist in Punch town.

### STATEMENT—V

This statement gives medical, educational, recreational and cultural facilities as were available in 1969 in each of the two towns. Under medical facilities are described the type of medical institutions and the number of medical beds available. Like-wise, different types of educational institutions available in each of the two towns have been covered under educational facilities. Information regarding the number of cinema houses, stadia, auditoria/drama halls and public libraries have also been incorporated in the statement to bring out the extent of availability of recreational and cultural facilities.

In column 3 of the statement, the following abbreviations have been used :—

HC — Health Centre  
TBC — T. B. Clinic

### Medical Facilities :

All told, there are only 3 medical institutions in the urban sector of the district, consisting of

2 health centres and one T. B. Clinic. While the 2 health centres are equally shared by Punch and Surankote, the solitary T. B. Clinic is located in Punch. A distinguishing feature about Punch health centre is that a strength of 20 beds was available in it in 1969 to cater to the in-patients of practically the whole district. If we consider the total urban population alone there are 1.4 beds available for every 1,000 persons. For Punch town the proportion is slightly high and stands at 1.7 beds per 1,000 population.

### Educational Facilities :

Punch town has a degree college with facilities for education in Arts, Science and Commerce. The college caters to the post-matric educational requirements of the whole district. No facilities for training in medicine or engineering are available in either town of the district.

Primary and secondary education in the two towns is provided by 5 higher secondary/high schools, 7 middle schools, 4 primary schools and 2 other types of schools. Of these only 2 higher secondary/secondary schools and one other type of school are in position in Surankote.

The following table gives the number of schools of each type per 1,000 population :—

TABLE NO. 2

### Secondary and primary schools per 1,000 population

Sl. No.	Name of town	Number per 1,000 population			
		All types	Higher secondary/secondary schools	Junior secondary/middle schools	Primary schools
(1)	(2)	(3)	(4)	(5)	(6)
1.	Punch	1.16	0.25	0.58	0.33
2.	Surankote	1.10	1.10	..	.
Total		1.16	0.36	0.51	0.29

Evidently, Punch town is much ahead of Surankote in the matter of schooling facilities, though neither can claim to have reached a satisfactory level. The fact that Punch is the district headquarter and has been a town for decades together gives it an obvious edge over Surankote.

### Recreational and Cultural Facilities :

Barring one cinema house and one public

library in Punch, there are practically no recreational or cultural facilities available in either of the two towns of the district. There are no parks or playground and no organised recreational or cultural activity worth the name.

#### STATEMENT—VI

This statement unfolds the facilities of trade, commerce, industry and banking, available in 1969, in the two towns of the district. The statement besides giving the number of credit co-operative societies, also gives the details of three most important commodities imported, exported and manufactured in either town of the district.

While selecting commodities for incorporation in the statement under sub-heads like import, export and manufacturing, preference has been given to those commodities as bear some relevance on the reputational value of the town. However, in respect of such commodities which have no influence over the reputation of the town, selection has been made on the basis of money value or quantity involved in transaction.

From the statement, it will be seen that ghee, fruits, broad beans (Rajmash) and soyabeans form the main exports of towns of the district. Similarly, woollen blankets (lois) timber and leather products form the main items of manufacturing. It deserves to be mentioned here that the timber items manufactured in the towns of Punch and Surankote are exceptionally known for their craftsmanship and are, therefore, exported to Jammu, where they have a ready market as also to other parts of the Jammu Province.

The only bank which operates throughout the district and the lone agricultural credit society are both located in Punch town. Surankote draws a complete blank in this respect.

#### STATEMENT—VII

This statement gives religion-wise population of the two towns of the district as returned at the 1971 census. The statement shows that both towns are multi-religious. The sub-joined table gives the position of each religious group in the two towns put together.

**TABLE NO. 3**  
**Urban Population by Religion**

Religion (1)	Urban population	
	Total (2)	Percentage (3)
<b>All Religions</b>	<b>13,803</b>	<b>100.00</b>
Buddhist	2	0.02
Christian	15	0.11
Hindu	6,334	45.89
Muslim	3,207	23.23
Sikh	4,245	30.75

It will be seen that Hindus, claiming a proportion of 45.89% of the total population, constitute the most predominant religious group. Sikhs form the second largest group with a proportion of 30.75%. Muslims, who rank third in the scale, constitute 23.23% of the total. Christians and Buddhists are practically a non-entity, together claiming as little as 0.13% of the total population.

A slightly different pattern is noticeable, if we examine the religion figures of Surankote town separately. Here, Muslims constitute the predominant religious group, claiming more than 66% of the total population. Hindus with a percentage of 31.06 hold the second position. Sikhs, constitute a small minority with a percentage of 2.20 only.

The sex ratio in respect of Sikhs and Hindus, the two major urban religious groups, is fairly good, there being 968 and 910 females per 1,000 males respectively. In the case of Muslims, however, the sex ratio is poor and works to 732 females per 1,000 males. The paucity of females may be one of the many factors responsible for the comparatively low growth rate of this community. Working sex ratio figures for Surankote town separately, one finds that the sex ratio among Muslims is comparatively better and works to 892 females for 1,000 males. This is even higher than the urban Muslim sex ratio of the state as a whole which comes to 851 for every 1,000 males.

#### Explanatory Note on Village Directory :

##### Data Content :

Like the Town Directory, the Village Directory presents a detailed account of the amenities available in each village of the district such as area

(in acres) educational and medical facilities, power supply, drinking water, communications, post and telegraph facilities, land use pattern, distance of the village from the nearest town, day or days of market/hat and places of religious, historical and archaeological importance.

The Directory also carries the following two appendices :-

Appendix—I : It gives the tehsil-wise list of villages arranged alphabetically alongwith their location numbers. This appendix, which appears in the beginning of the publication, is intended to help the reader in identification and locating of the village from the Directory as well as the Primary Census Abstract.

Appendix—II : It gives the abstract of all the amenities available in the tehsils of the district and appears after the Village Directory.

#### Maps :

The publication has been supplemented with the following maps :-

District Map : Showing tehsil boundaries and location of towns within the district. This map appears as a frontis piece.

Tehsil Map : Depicting the location and boundaries of each village and town within the limits of the tehsil. Besides it also illustrates with suitable symbols the population and other amenities available in each village and town of the tehsil.

#### Abbreviations :

A number of abbreviations has been used in the Directory. These are amplified below :-

Column No.	Item	Abbreviation
4	Maktabas	Mkt
	Pathshalas	PS
	Primary School	Pr.S
	Basic Activity School	BAS
	Central School	CS
	Middle School	Mid.S
	Lower High School	LHS
	High School	HS
	Higher Secondary School	Hr. Sec.

5	Health Centre	HC
	Dispensary	D
	Family Planning Centre	FPC
	Sub-Centre	SC
	First Aid Centre	FAC
6	Electrified	E
7	Tap Water	T

	Telegraph Office	TO
	Post and Telegraph Office	POTO
	Telephone	Phone
12	Govt. Canal	*C
	Non-Govt. Canal	C
	River	R
	Tube Well	TW
	Other than Canal and River	O

#### The Rural Area :

The rural sector of the district consists of \*175 villages, of which 157 are inhabited and 18 uninhabited. At the 1961 Census, Punch district was composed of 562 villages, out of which 547 were inhabited and 15 uninhabited. During the intercensal period of 1961-71, two of its four tehsils viz ; Rajauri and Nowshehra were detached from it to constitute a new district of Rajauri. As a sequel to these large scale jurisdictional changes the district has now the smallest number of villages amongst all the districts of the state. For administrative convenience these villages have been apportioned into two tehsils viz ; Haveli and Mendhar as per distribution indicated below :-

**TABLE NO. 4**  
**Tehsil-wise distribution of villages**

Sl. No.	Name of tehsil	Number of villages		
		Total	Inhabited	Un-inhabited
(1)	(2)	(3)	(4)	(5)
1.	Haveli	85	82	3
2.	Mendhar	90	75	15
	Total	*175	157	18

\* One forest Block of Haveli tehsil has not been treated as village.

### Villages by Area :

As many as 135 out of a total 175 villages fall in the area groups 501-5000 acres. Out of the remaining 40 villages, 26 fall in the area group 201 to 500 acres. There are only 2 villages which belong to the area group 51 to 100 acres. The following table makes an interesting reading in this behalf:—

**TABLE NO. 5**  
**Distribution of villages with reference to their area (area in acres)**

Sl. No.	Area (in acres)	Number of villages
1.	51 to 100	2( 1.14)
2.	101 to 200	5( 2.86)
3.	201 to 500	26(14.86)
4.	501 to 1,000	45(25.71)
5.	1,001 to 2,000	47(26.86)
6.	2,001 to 5,000	43(24.57)
7.	5,001 or more	7( 4.00)
Total		175(100.00)

NOTE—(Figures within brackets indicate percentage to total number of villages.)

The same position more or less obtains in the tehsils. In Mendhar tehsil, however, the area group 2,001 to 5,000 acres claims the largest proportion of villages, being of the order of 34.44%.

### Educational Facilities :

As per available information, 111 out of a total of 157 inhabited villages of the district are provided with primary schools. The primary schools, numbering 152, cater to a rural population of 156,984 persons. In other words, there is one primary school for every 1,033 persons of the rural population. Between the two tehsils, Mendhar is better placed with a proportion of 72.0% of its villages being provided with primary schooling facilities as compared to Haveli where this proportion is only 69.51%.

The available primary, middle and high/higher secondary schooling facilities in the rural part of the district are brought out in the following table :-

**TABLE NO. 6**  
Number of villages having

Sl. No.	Name of tehsil	Number of villages having		
		PS/MKT/BAS/Primary School	Central/Middle Schools	Lower High/High/Higher Secondary Schools
(1)	(2)	(3)	(4)	(5)
1.	Haveli	57(69.51)	13(15.85)	5(6.10)
2.	Mendhar	54(72.00)	21(28.00)	5(6.67)
Total		111(70.70)	34(21.66)	10(6.37)

NOTE :—(Figures within brackets show percentage to total inhabited villages in each tehsil)

It will be seen that of the 44 villages provided with educational institutions, other than primary schools, 34 have central/middle schools and the rest high/higher secondary schools. Coming to the tehsils, it seems that while Mendhar is better placed than Haveli in the provision of middle schools, both are more or less at par in high/higher secondary schooling facilities.

The following table gives the distribution of villages with different types of educational institutions by distance from the nearest town :-

**TABLE NO. 7**

Sl. No.	Distance from the nearest town (in kms.)	Total No. of inhabited villages	Number of villages having		
			PS/MKT/BAS/Primary Schools	Central/Middle Schools	Lower High/High/Higher Secondary Schools
(1)	(2)	(3)	(4)	(5)	(6)
1.	5 or less	16	14(87.50)	3(18.75)	..
2.	6—10	36	26(72.22)	7(19.44)	3( 8.33)
3.	11—15	24	16(66.67)	4(16.67)	1( 4.17)
4.	16—25	31	17(54.84)	7(22.58)	2( 6.45)
5.	26—50	40	29(72.50)	11(27.50)	3( 7.50)
6.	51—100	10	9(90.00)	2(20.00)	1(10.00)
Total		157	111(70.70)	34(21.66)	10( 6.37)

NOTE :—(Figures within brackets show percentage to total number of inhabited villages in each distance group).

As will be seen from the foregoing statement, the distance from the nearest town has in no way resulted in restricting in more or less even dispersal of educational facilities in the rural areas of the district. Even the farthest villages falling at a distance of 26 to 100 kms. from the nearest town, enjoy fairly distinctive position in the provision of schooling facilities of different types.

### Medical Facilities :

The available information shows that only 22 villages out of a total of 157 inhabited villages of the district are provided with medical institutions. Of these, 15 are equipped with dispensaries and the remaining seven with family planning/first aid/sub-centres. The total number of medical institutions is 23 which gives a ratio of one institution for every 6,821 persons inhabiting the rural areas of the district. Between the two tehsils, Mendhar is relatively better placed in the provision of medical facilities with 10 dispensaries and 3 family planning/sub-centres as against Haveli with 6 dispensaries and 4 family

planning/sub-centres. No village in either tehsil has so far been provided with a hospital or a health centre. The rural population have, therefore, to share the in-patient facilities available in Punch town.

The following table gives the distribution of medical institutions per 100 km<sup>2</sup> :—

**TABLE NO. 8**  
**Medical facilities per 100 km<sup>2</sup>**

Sl. No.	Name of tehsil	Total village paper area (in km <sup>2</sup> )	No. of medical institutions of any kind	No. of medical institutions per 100 km <sup>2</sup>
(1)	(2)	(3)	(4)	(5)
1.	Haveli	453.42	10	2.21
2.	Mendhar	672.90	13	1.93
Total		1,126.32	23	2.04

The table shows that the 23 rural medical institutions of the district are spread over to an area of 1126.32 km<sup>2</sup>, making out a ratio of 2.04 medical institutions per 100 km<sup>2</sup>. It is interesting to note that though the number of institutions is less in Haveli than in Mendhar tehsil, the former, owing to smaller assessed area, is better placed than the latter in the institution area ratio.

#### Electricity :

The data available for the year 1969 shows that only 5 villages of the district have been provided with electricity for domestic consumption. Of these, 4 fall in Mendhar tehsil and one in Haveli tehsil. This means the available power supply is far short of the requirements. Power generation, which did not receive the priority during the earlier plans, is still not receiving the attention, it deserves.

The following table gives the distribution of electrified villages by their distance from the nearest town :—

**TABLE NO. 9**

Sl. No.	Distance from the nearest town (in kms.)	Total No. of inhabited villages	Number of villages with electric power supply
(1)	(2)	(3)	(4)
1.	5 or less	16	3(18.75)
2.	6—10	36	..
3.	11—15	24	..
4.	16—25	31	..
5.	26—50	40	1( 2.50)
6.	51—100	10	1(10.00)
Total		157	5( 3.18)

NOTE :—(Figures within brackets indicate percentage to total number of villages in each distance group)

It will be seen that of the five villages electrified upto 1969, 3 villages are at a distance of 5 or less than 5 kms. from the nearest town. Of the remaining two, one belongs to the group of villages falling as far as 26 to 50 kms. and the other in the range of 51 to 100 kms. from the nearest town. This shows that proximity to town is no criterion in the electrification of villages.

#### Drinking Water Facilities :

Like electricity, the position of water supply in the district is far from satisfactory. The data shows that upto 1969 only 4 villages of Mendhar tehsil or 2.54% of the total inhabited villages of the district were enjoying the protected drinking water facilities. Haveli tehsil is completely devoid of this amenity. No village of the district uses well-water for drinking purpose. The rural inhabitants mostly utilise spring or nallah/stream water for drinking purpose.

#### Communications :

Only 58 villages or 36.95% of the total inhabited villages of the district are provided with communication links. Of these, 34 villages are connected with pucca roads and 24 villages with kutcha roads. 99 villages or more than 63% villages of the district are still devoid of any road connection.

The following table highlights the distribution of villages with different types of road links by distance from the nearest town :—

**TABLE NO. 10**

**Distribution of villages with different type of communication facilities by distance from the nearest town**

Sl. No.	Distance from the nearest town (in kms.)	Total No. of inhabited villages	Number of villages having		
			Pucca Roads	Kutcha Roads	No Roads
(1)	(2)	(3)	(4)	(5)	(6)
1.	5 or less	16	11(68.75)	1( 6.25)	4(25.00)
2.	6—10	36	8(22.22)	4(11.11)	24(66.67)
3.	11—15	24	5(20.83)	2( 8.33)	17(70.83)
4.	16—25	31	4(12.90)	6(19.35)	21(67.74)
5.	26—50	40	2( 5.00)	8(20.00)	30(75.00)
6.	51—100	10	4(40.00)	3(30.00)	3(30.00)
Total		157	34(21.66)	24(15.29)	99(63.06)

NOTE :—(Figures within brackets indicate percentage to total number of villages in each distance group)

The table reveals that with increase in distance from the nearest town, the proportion of villages with pucca roads decreases and conversely the proportion of villages with kutchra roads increases. The only exception to this fact is discernible in the case of farthest villages located at a distance of 51 to 100 kms. from the nearest town.

#### Post and Telegraph Facilities :

Only 21 villages or 13.37% of the total inhabited villages of the district are provided with post offices. In other words, more than 86% villages of the district are still to enjoy these facilities. Interestingly, both Mendhar and Haveli tehsils are at par in the number of villages equipped with post office facilities, their number being 11 and 10 respectively. It is distressing to note that even by the end of 1969, no village of the district was provided with a telegraph office. Telephone facilities are available in only two villages both belonging to Mendhar tehsil.

The following table gives the distribution of post offices per 100 km<sup>2</sup> :—

**TABLE NO. 11**

#### Number of post offices per 100 km<sup>2</sup>

Sl. No.	Name of Tehsil	Total village paper area (in km <sup>2</sup> )	No. of post offices	No. of post offices per 100 km <sup>2</sup>
(1)	(2)	(3)	(4)	(5)
1.	Haveli	453.42	10	2.21
2.	Mendhar	672.90	11	1.63
Total		1,126.32	21	1.87

It will be seen that the rural sector, extending to an area of 1,126.32 km<sup>2</sup>, encompasses within it only 21 post offices, which gives an average of 1.87 post offices per 100 km<sup>2</sup>. Haveli tehsil with 2.21 post offices per 100 km<sup>2</sup> is well above the district average. Mendhar tehsil, where the number of post offices per 100 km<sup>2</sup> works to 1.63, is far lagging behind.

#### Staple Food :

The following table gives the number of villages of the district reporting staple food :—

**TABLE NO. 12**

S. No.	Name of tehsil	Number of villages reporting staple food as			
		Rice	Wheat	Maize	Others
(1)	(2)	(3)	(4)	(5)	(6)
1.	Haveli	80	..	82	..
2.	Mendhar	72	3	75	..
Total		152	3	157	..

The foregoing statement provides an interesting study. It will be seen that maize constitutes the staple food and rice as co-staple food for almost all the villages of the district. More or less the same position obtains in the individual tehsils also.

#### Land Use :

A note worthy feature of the District Census Handbook published at 1971 Census is that they contain land use statistics down to village level. The main purpose behind its presentation at village level was to give a comprehensive picture regarding the use of land in our rural sector. Under this sub-head, particulars have been provided on items like Forest area; cultivated land together with (a) irrigated and (b) un-irrigated areas; cultivable waste and area not available for cultivation.

The total village paper area, as per available statistics, stands at 2,78,318 acres or 1,126.32 km<sup>2</sup>. This is well below the approximated geographically area of 1643.12 km<sup>2</sup>. Forest area measuring 80,379 acres, in all, accounts for 28.88% of the total assessed area. Of the total cultivated land in the district, only 10.97%, is irrigated, which implies that a very high proportion of cultivated land (89.03%) still remains dependent on natural rains. Culturable waste claims more than 21% of the total revenue area. Area not available for cultivation is still more and accounts for 24.90% of the total village paper area.

The following table gives the percentage of cultivable waste per village to average cultivated land per village by distance group from the nearest town :—

TABLE NO. 13

Percentage of average cultivable waste per village to average cultivated land per village by distance from the nearest town

Sl.No.	Distance from the nearest town (in kms.)	No. of villages	Total cultivated land (in acres)	Average cultivated land (in acres)	Total culturable waste (in acres)	Average culturable waste (in acres)	Percentage of culturable waste to average cultivated land
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1.	5 or less	16	6,155	384.69	4,752	297.00	77.21
2.	6—10	36	16,313	453.14	12,542	348.39	76.88
3.	11—15	24	6,852	285.50	6,469	269.54	94.41
4.	16—25	31	9,528	307.35	8,348	269.29	87.62
5.	26—50	40	16,657	416.43	15,271	381.78	91.68
6.	51—100	10	8,168	816.80	9,189	918.90	112.50
7.	Un-inhabited villages	8	1,034	129.25	2,563	320.38	247.88
8.	Un-administered villages	10	2,077	207.70	1,178	117.80	56.72
Total		175	66,784	381.62	60,312	344.64	90.31

The table reveals that the proportion of culturable waste to average cultivated land goes on increasing with increase in distance from the nearest town except, of course, with slight variation in the case of villages located at a distance of

11 to 15 kms. from the nearest town. The proportion put up by these villages (94.41%) is comparatively higher than in the case of villages placed farther off.

PART X-B  
VILLAGE AND TOWNWISE  
PRIMARY CENSUS  
ABSTRACT

## PRIMARY CENSUS ABSTRACT

As already mentioned, Primary Census Abstract constitutes part B of the publication. It is exclusively based on 1971 Census and provides information down to village and block/ward/mohalla of a town on items such as area of the village in hectares and that of towns in square kilometres ; number of residential houses ; number of households ; total population with sex-wise break-up ; scheduled caste population ; literate and educated persons ; total working population and nonworking population. The total working population has been classified into the following nine industrial categories with sex-wise break-up :—

- I. Cultivators
- II. Agricultural Labourers
- III. Livestock, Forestry, Fishing, Hunting and Plantations, Orchards and allied activities.

- IV. Mining and Quarrying
- V. Manufacturing, Processing, Servicing and Repairs
  - a) Household Industry
  - b) Other than Household Industry
- VI. Construction
- VII. Trade and Commerce.
- VIII. Transport, Storage and Communications
- IX. Other Services

The following abbreviations have been used in the Primary Census Abstract to facilitate presentation :—

- Town Area Committee : T. A.  
Notified Area Committee : N. A.

10/II	Surankote N. A.	4.52	302	311	1,822	964	858

\*Represents provisional "geographical area" figures supplied by the Surveyor General, India. Figures for urban areas are those supplied by the Local Bodies. Area figures for rural areas are derived by subtracting the urban area from the total area of the district. The total of the area figures of the tehsils will not tally with the district figures because the former represent "Land Use" area and are derived from the figures supplied by the Revenue Department.

Conversion factor 1 Acre=0.40,469 Hectares and 100 Hectares=1 Km<sup>2</sup>.
