INTRODUCTION

INTRODUCTION

The actual enumeration i.e. the second phase of the field work of 1991 Census, was conducted from the 9th February to 28th February, 1991 with a revisional round from 1st March to 5th March 1991 in order to bring the Census count correct upto the reference date i.e. the Sunrise of 1st March, 1991. By 12th March, 1991 messages were received from the District Census Officers in the Directorate of Census Operations, Tripura in the following format which contained information only on sex and literacy status of population of each district :

Total Population

Total Male Population

Total Female Population

Total Literate Persons

Total Male Literates

Total Female Literates

Provisional Population Totals—Paper 1 of 1991 comprising of information of Population, Literacy, Sex ratio and Growth rates was published after compilation of data, contained in the above messages received from the districts. During the last week of March, 1991 all papers including the working sheets of enumerators and higher levels of the hierarchy have been received.

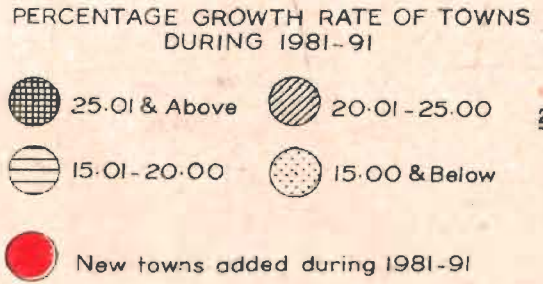

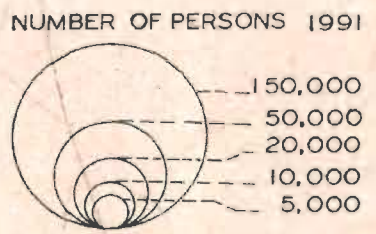

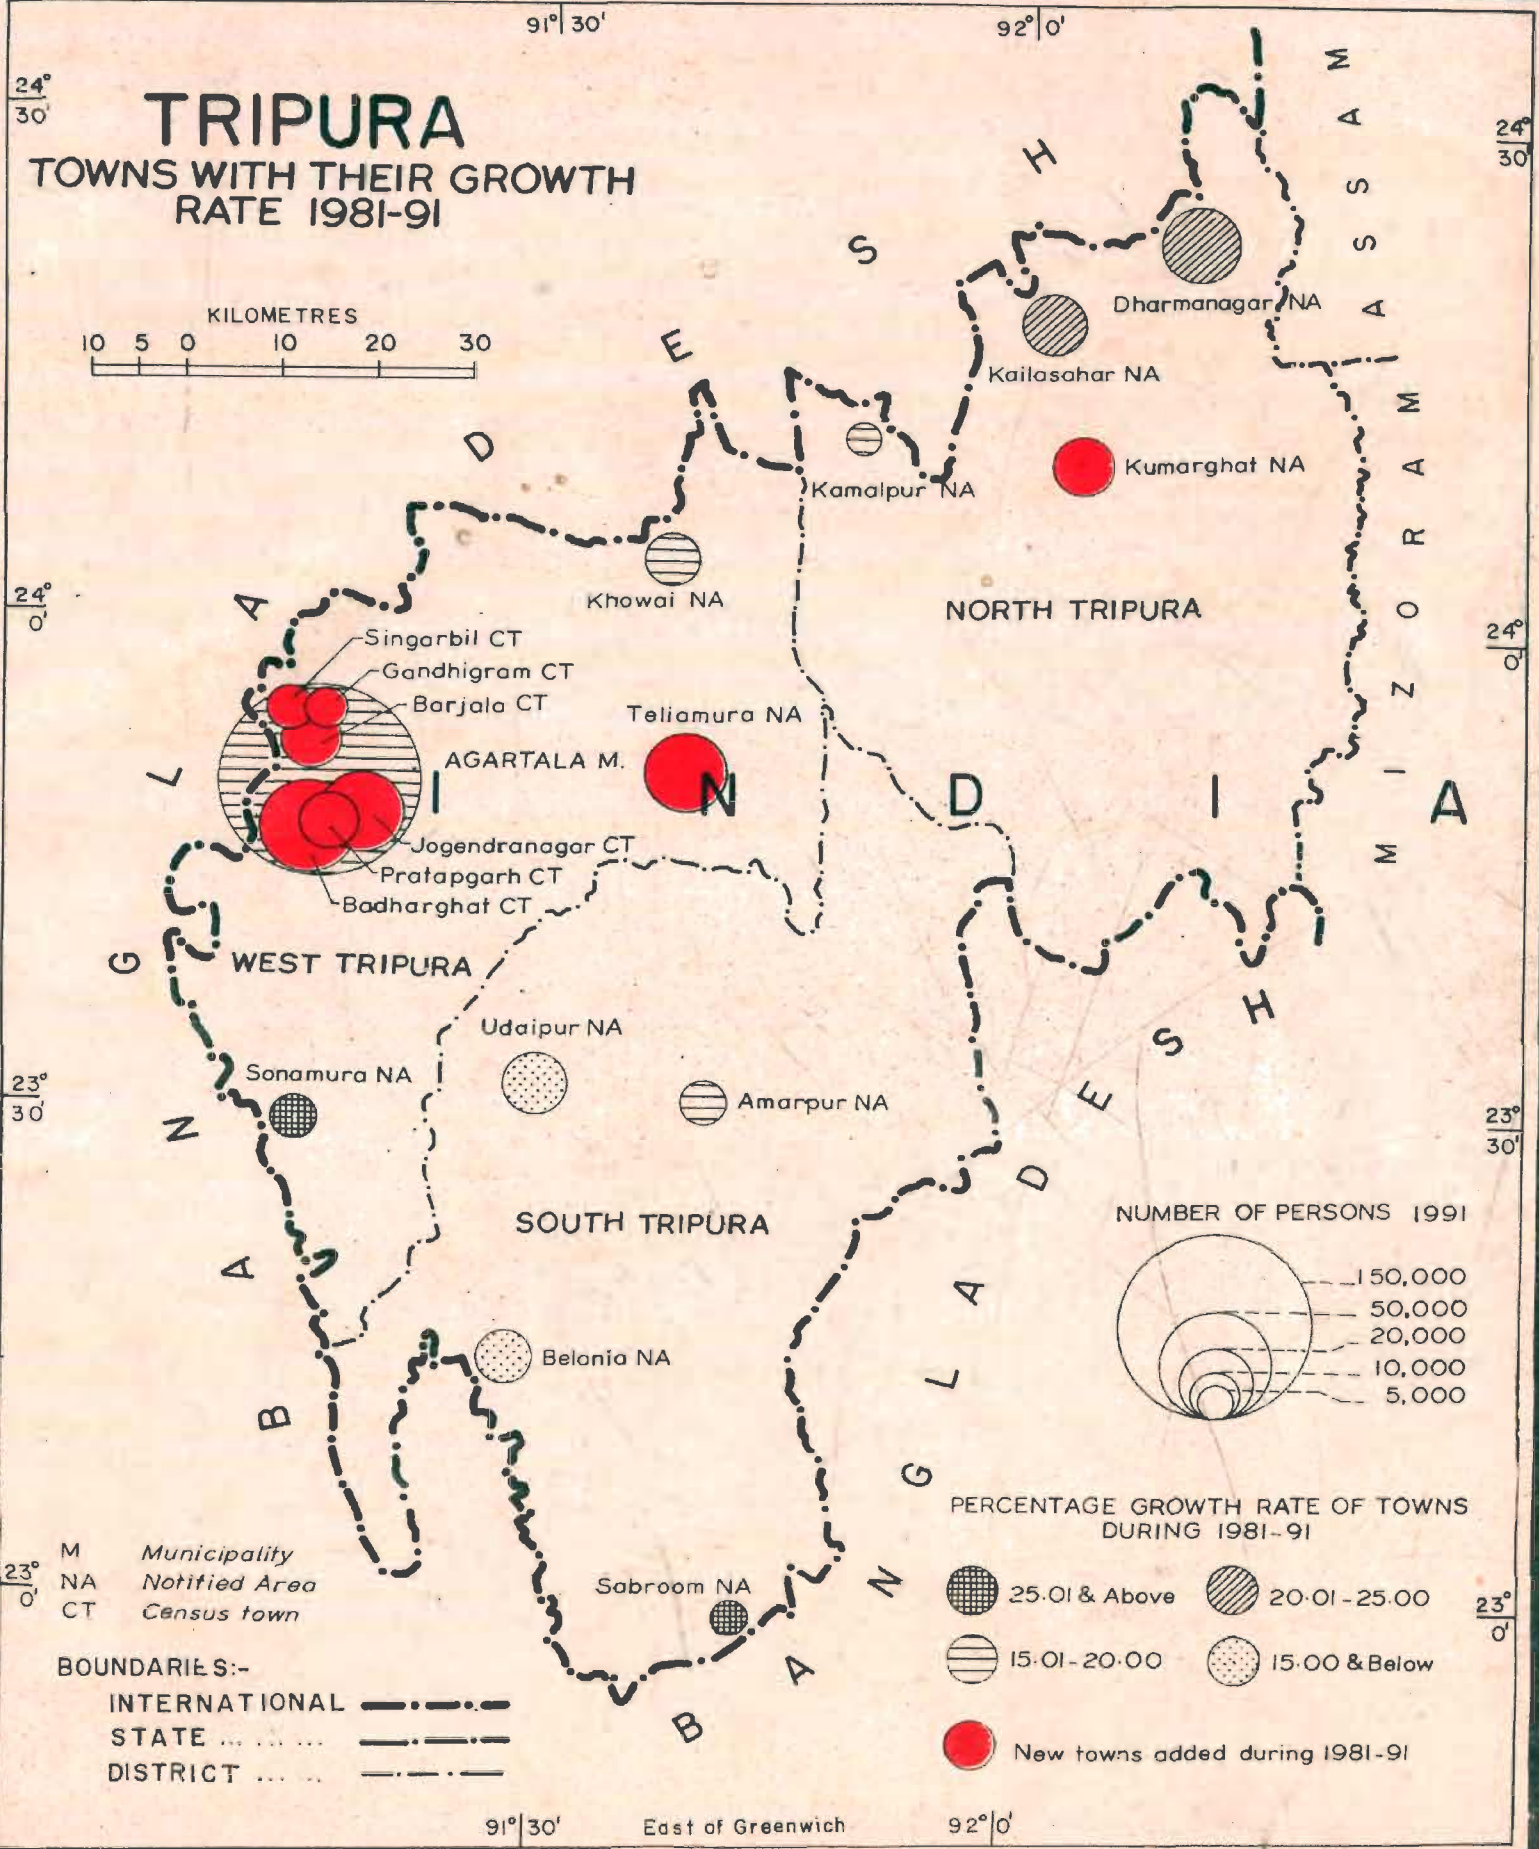

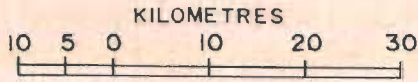

A preliminary scrutiny of these working sheets containing population of enumeration blocks classified by sex, literates and some other socio-economic characteristics has been conducted for finalisation of figures of this booklet entitled "Supplement to Paper 1 of 1991—Provisional Population Totals".

Apart from making information available upto district level, the present publication covers much wider field of information like the population and growth of Cities/Towns/Urban Agglomeration and Towns of various classes in the State, distribution of population according to the size of town, distribution of main workers, marginal workers to total population. The main workers have been further split into their various working categories like Cultivators, Agricultural labourers, Household Industries and other workers by percentage as well as in absolute figures. In the Paper 1, as we have already stated, the figures were presented in district level for totals only but this time rural-urban break-up has been presented. Again for the comparative study the percentages of total workers. Main workers with four broad categories and marginal workers and the growth rates have been shown for 1981 and 1991 Censuses.

ANALYTICAL NOTE

ANALYTICAL NOTE

The figures presented in the publication are provisional. The figures collected in the field will take the final shape after thorough scrutiny and compilation in the form of Primary Census Abstract in the Regional Tabulation Office.

Before discussing the tables on the basis of which the tables have been presented may be explained :—

1. Urbanisation :—Urbanisation by itself is not a characteristics of the population, though urbanism may be considered as such. Residence in urban area does not automatically develop the characteristics referred to as urbanism. This has been found to be particularly true for developing countries like India, where thousands of poor people migrate to cities and towns and lead to a frugal life in urban slums.

Nevertheless, it is necessary to classify the population as Rural and Urban, since it helps in assessing the differential in the Socio-economic and demographic characteristics of the population. Residence in Rural or Urban area is accepted as a basic information for stratification in socio-economic and demographic studies, because our experience has proved that this is a variable on which many of the characteristics depend.

The word 'Urban' refers to areas and definition adopted for it in the Census is as follows :—

- a) All places with a municipality, corporation or cantonment or notified town area ;
- b) All other places which satisfy the following criteria ;
 - i) a minimum population of 5,000 ;
 - ii) at least 75 percent of male working population engaged in non-agricultural (and allied) activity ;
 - iii) a density of population of at least 400 per Sq. Km.

This is precisely the definition adopted in 1991 Census.

The fairly strict definition of an urban area had started to be adopted in India from the 1961 Census before which it was left entirely to the discretion of the local authorities.

The urban criterion of 1981 and 1991 varies slightly from that of 1961 and 1971 Census. Working activities like fishing, logging etc. has not been treated as non-agricultural activities in 1981 and 1991 for the purpose of testing whether 75% of male working population is non-agricultural. To that extent the definition has become a bit stringent compared to that of 1961 and 1971.

A term which appears in urban classification and in Supplement tables of this publication is "Urban Agglomeration" (UA). For this the 1971 Census concept has been adopted and the same is indicated below :—

"Very after University Campus, military campus etc. come up adjoining a town but outside its statutory limits. Such areas may not by themselves qualify to be treated as towns, but they are outgrowths of the town and form a continuous spread with the town".

Such towns together with their outgrowths are to be treated as one urban unit and called "Urban Agglomeration" (UA). There is no such unit in Tripura in 1991 Census.

In 1981 besides Agartala Municipality, all other Sub-divisional headquarters were treated as urban for the purpose of Census. During 1981-91 two other important places were declared notified areas by the State Govt. of Tripura. An exercise was made with all the revenue villages to examine whether any of the villages satisfies the criteria to be declared as urban. 6 (six) revenue villages under Sadar Sub-division were found to satisfy the criteria to be declared as census towns. Hence in 1991 Census there are one Municipal Town, eleven (11) Notified areas and six (6) census towns in Tripura State.

Work :—In Census, "work may be defined as participation in any economically productive activity. Such participation may be physical or mental in nature. Work involves not only actual work but also effective supervision and direction of work. It also includes unpaid work on firm or in family enterprise".

In case of inter-censal growth rate 1971-81 in 1981 Census as per size class of that Census growth rate was maximum (44.89) in Class V size whereas growth rate was found to be lowest 1.40 in size class IV. But growth of population according to the size class of the 1981 Census, size class I shows the highest growth 31.84 followed by Class IV as 17.71 and Class V 14.82. In 1981-91 growth rate as per size class of 1991 the highest growth has been exhibited by size class III towns as 455.63 followed by Class V and Class IV as 146.61 and 98.61 respectively whereas Class I shows the minimum growth rate of 19.25. But as per size class of 1981 the growth rate of 1981-91 was found to be within a range of 15 to 30 percent in all the size classes of the towns.

The term of workers, main workers and marginal workers have already been discussed earlier. It is also discussed that for the calculation of proportion of workers, main workers and marginal workers to total population for the year 1981 the jurisdiction of 1991 has been taken into consideration.

In the State of Tripura, percentage of total workers, main workers and marginal workers in case of total areas and rural areas are found to be decreased in 1991 from 1981 whereas in case of urban it is found to be just reverse i.e. percentage of workers and main workers increased, during 1991 Census with the exception in marginal workers. Again the percentage in male working group found to be decreased in 1991 from 1981 in all the cases of males while increased in case of females showing a clear increase in female working population in 1991 than 1981. However, the variation of the percentage is not much in all the cases in quantity.

However, in case of districts the percentage difference is not similar to the total of the State. There are slight variations. But it is in almost all the cases that the females participation in work in 1991 is more than in 1981 in all categories of workers.

In case of Agartala city a different picture is depicted. In all cases of males and females, the percentages have been increased in 1991 than in 1981 for total workers and main workers but decreased in case of marginal workers.

To sum up it is found that out of 100 persons in 1991, 31 are workers out of them 29 are main workers and 2 are marginal workers while in 1981 they were 32, 30 and 2 respectively. Again in male in 1991, out of 100 persons males 47 are workers and out of them 46 are main workers, 1 is marginal worker while in 1981 they were 50, 49 and 1 respectively. But in female in 1991, out of 100 only 14 are workers and out of them 10 are main workers and 4 marginal workers while in 1981 they were 13, 9 and 4 respectively.

Supplement Table 6 :— This table presents the absolute figures of main workers and its break up into four categories viz., 1) Cultivators, 2) Agricultural labourers; 3) Household Industry and 4) Other workers. This table also depicts the percentage of four categories of main workers to total main workers in 1981 and 1991.

As already mentioned, in calculating the percentage of workers, the population of 1981 on the jurisdiction of 1991 has been considered to have the clear comparative picture of percentages in different categories of main workers.

Alike 1981 Census, the proportion of cultivators in rural areas are predominant while in urban areas the proportion of other workers are dominating. In rural, again the next to cultivators are agricultural labourers while in urban areas next to other workers are minor percentages distributed in other three categories. It is very interesting to observe in the table that in rural areas of the State the male proportion of cultivator has decreased in 1991 but has increased in agricultural labourers, workers in household industry and other workers. But in case of female the proportion has increased in cultivators and household industry and decreased in agri-labourer and other workers. In case of urban areas of the State the change of percentage in 1991 from 1981 is different. For the male and female main workers, proportion in minor quantity, increased in Cultivators, Agricultural labourers and household industry while that entire quantity is found to be decreased in other workers in 1991 in compare to 1981.

Similar characteristics is found in the districts of the State. But in Agartala City almost all the male and female working population found in other workers in 1991 while in the other categories the main workers exist with negligible quantity of percentage alike 1981.

The total picture of the table depicts that out of 100 main workers of 1991, 38 are Cultivators 24 are Agricultural labourers, 2 are engaged in Household Industry and 36 in other works while in 1981 they were 43 Cultivators, 24 Agri-labourers, 2 in Household Industry, 32 in other works. Among 100 male main workers 38 are Cultivators, 22 are Agri-labourers, 2 are in Household Industry and 38 other workers in 1991, whereas in 1981 they are 44, 23, 1 and 32 respectively. In case of females in 1991 out of 100 main workers 37 are Cultivators, 31 Agricultural labourers, 3 workers in Household Industry and 29 other workers whereas in 1981 they were 38, 32, 3 and 27 respectively.
