MYSORE

Paper I of 1971 (Supplement)

POPULATION TOTALS

(PROVISIONAL)

P. PADMANABHA

OF THE INDIAN ADMINISTRATIVE SERVICE
DIRECTOR OF CENSUS OPERATIONS
MYSORE

INTRODUCTION

This booklet is a supplement to the previous publication entitled "Provisional Population Totals" which was Paper 1 of 1971 of the Census of India. In this booklet the Provisional Population figures relating to rural and urban composition of the population, the population of towns and the distribution of population by workers and non-workers are included.

Some of the demographic features covered by Paper 1 relate to the distribution of population in the districts, sex ratio, density of population, growth rate, population of cities and literacy. Paper 1 contains Tables I to IV incorporating these particulars. This Supplement contains further tables from Table No. V to VIII and incorporates the provisional population figures relating to the characteristics mentioned earlier.

As has been mentioned in Paper 1, these figures are also based on the abstracts prepared by the Enumerators on the basis of initial Census records and must, therefore, be considered as only approximate and crude totals. The figures are entirely provisional, the final figures being available only after the tabulation programme has been gone through. Since the full tabulation of the results is likely to take time, this Supplement along with Paper 1 of 1971 seeks to provide certain essential information regarding the population of the State.

Bangalore,

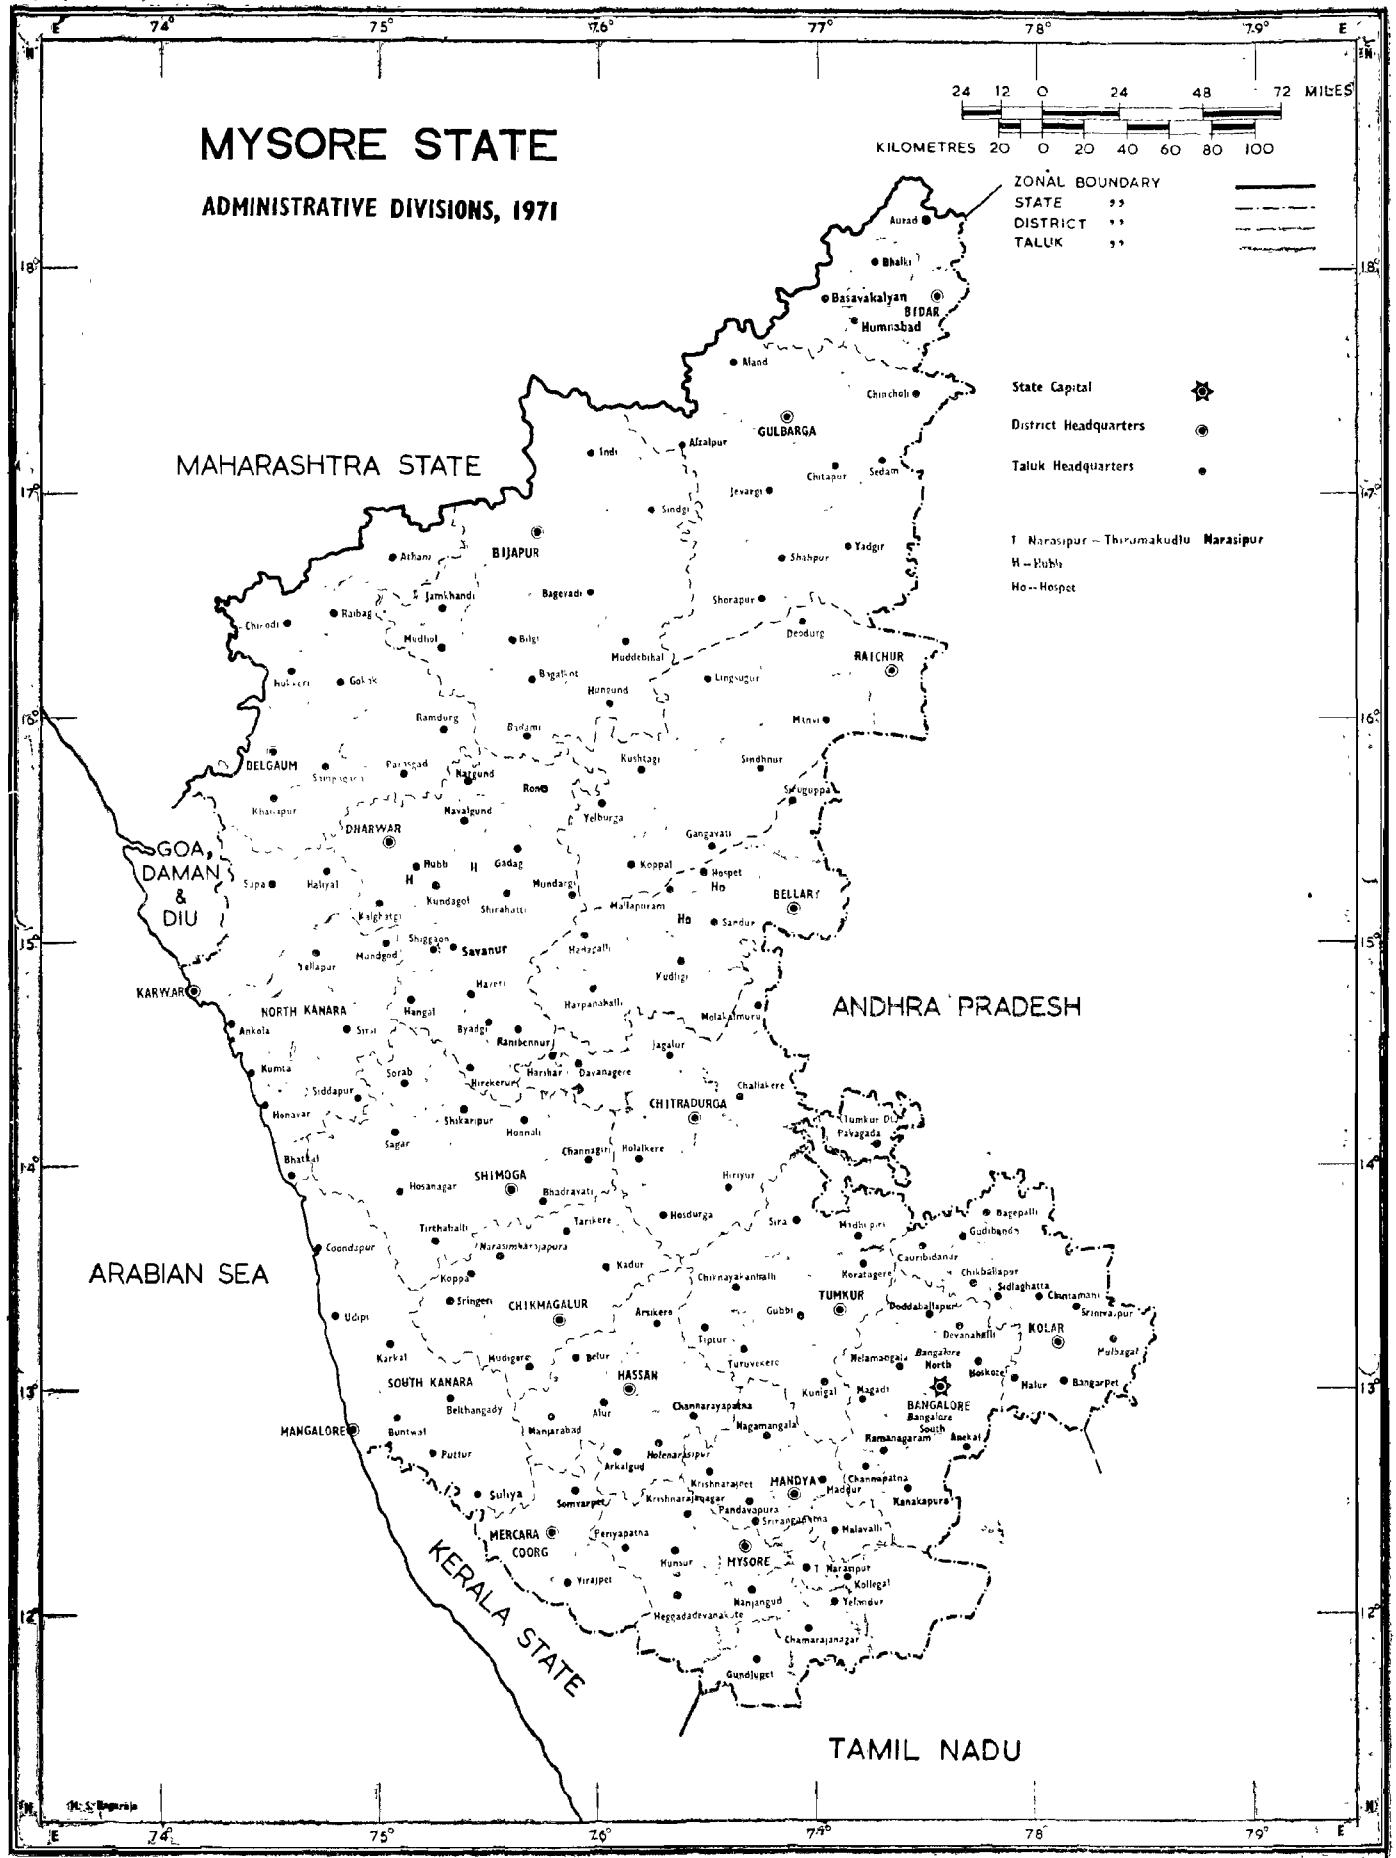

May, 1971.

M.S. 1971

Rural-Urban Composition of the Population

The distribution of the population in the rural and urban areas is an important demographic characteristic. For Census purposes, certain places are classified as urban areas based on the following criteria :

- (i) all municipalities, cantonments, notified areas ;
- (ii) places with a population of 5,000 to 10,000 with a density of not less than 1,000 per square mile and with at least three-fourths of male population engaged in non-agricultural activities;
- (iii) places having pronounced urban characteristics but not satisfying the two criteria indicated above.

Places satisfying any one of the three criteria mentioned above have been classified as towns. Among towns, those with a population above one lakh are termed Cities.

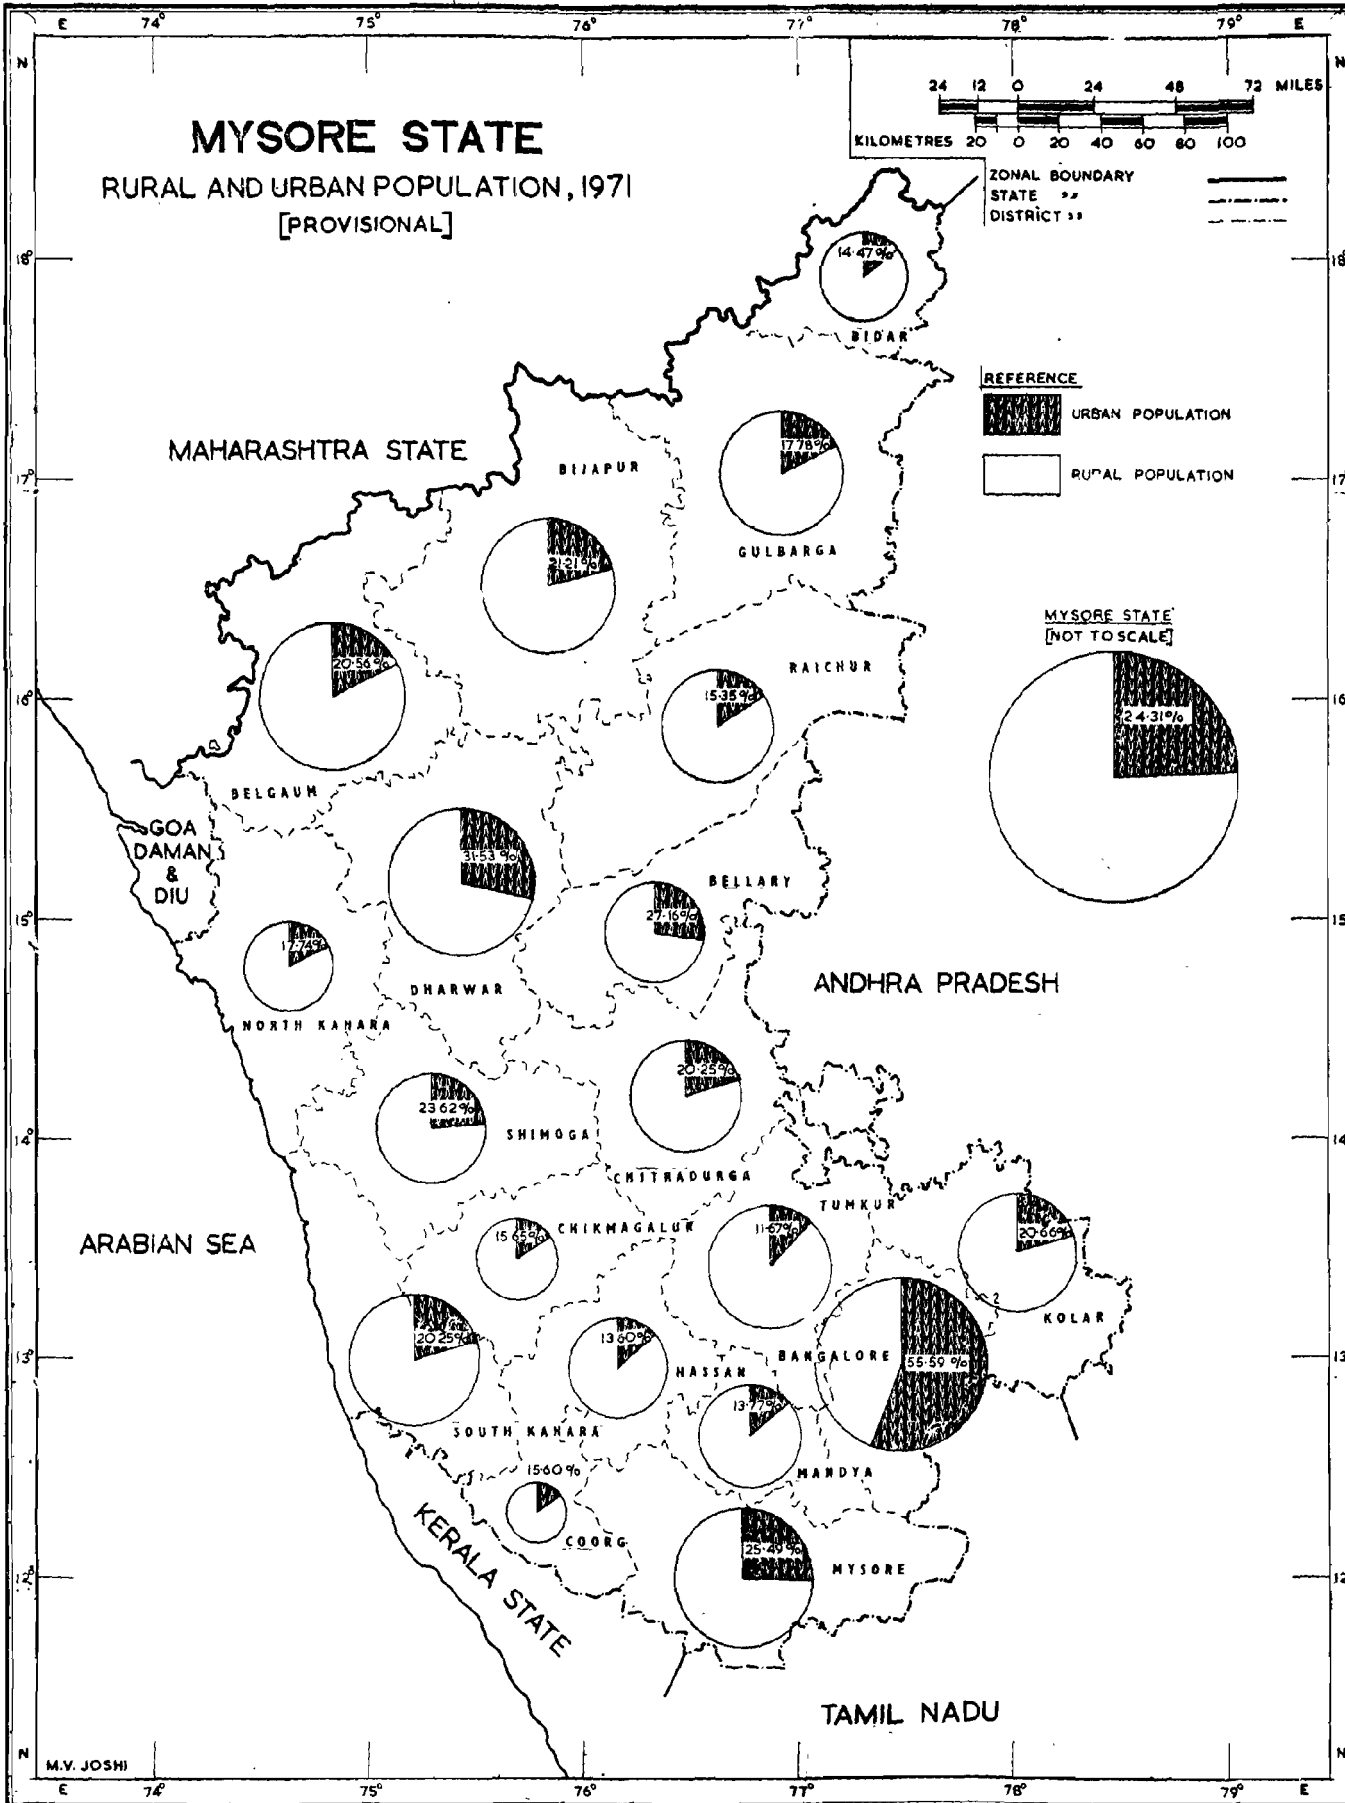

In Mysore State, there are 245 towns and 29,490 villages. Of the population of 29,263,334 in the State, 22,148,627 or 75.69 per cent live in the rural areas, while 7,114,707 or 24.31 per cent live in urban areas. In 1961, the rural and urban proportions were 77.67 per cent and 22.33 per cent respectively, with 18,320,279 living in the rural areas and 5,266,493 in urban areas. There has thus been a slight increase in the urban proportion.

Table No. V at page 21 gives the rural and urban composition of the population districtwise. Bangalore District has the highest urban proportion of 55.59 per cent. This is mainly due to Bangalore City since of the total population of the district of 3,346,405 persons 1,648,232 are in Bangalore City. The district has a total urban population of 1,860,221. Thus, Bangalore is the most urbanised district in the State.

Dharwar District has the second highest urban population among the districts in the State while Tumkur District has the least. Only the districts of Bangalore, Dharwar, Bellary and Mysore have urban proportions greater than the State average of 24.31 per cent. All the other districts have urban proportions below the State average.

In 1961, Bangalore District had the highest proportion among the districts in the State of urban population. It continues to maintain this position in 1971 also. Similarly, the districts of Dharwar, Mysore, Belgaum, South Kanara, Chikmagalur, Bidar and Tumkur retain the ranks they held in 1961 this time also. Dharwar District has the second place with respect to proportion of urban population while Mysore has the fourth place. Tumkur District both in 1961 and 1971 has the smallest proportion of urban population among all the districts in the State.

The decennial growth rate of population in the State in the decade 1961-71 is 24.07 per cent. The decennial growth rates in this decade in the rural and urban areas are 20.90 and 35.09 per cent respectively. The corresponding growth rates in the previous decade 1951-61 were 22.56 and 18.26 per cent respectively. The urbanisation therefore is on the

increase. Mandya District has had the highest decennial growth rate with reference to urban population. Its decennial growth rate is 58.68 per cent. Closely following are the districts of Chitradurga, Bidar, Shimoga, Hassan, Tumkur, Bangalore, Gulbarga, Mysore, Dharwar and Raichur. Kolar District has had the lowest decennial growth rate with regard to urban population (18.09 per cent).

In all the districts, the urban decennial growth rate in the decade 1961-71 is greater than the rural growth rate. The districts of Mandya, Chitradurga, Bidar, Shimoga, Hassan, Tumkur, Bangalore, Gulbarga, Mysore, Dharwar and Raichur have had urban decennial growth rates higher than the State average while all the other districts have growth rates below the State average. Among the districts in the State, Bangalore District has the highest rural decennial growth rate of 29.57 per cent while Dharwar District has had the lowest rural decennial growth rate of 13.76 per cent. The districts which have rural decennial growth rates in the decade 1961-71 higher than that of the State average of 20.90 per cent are Bangalore, Bidar, Chikmagalur, Chitradurga, Gulbarga, Mandya, North Kanara, Raichur, Shimoga and South Kanara.

The statement below gives the percentage of urban population to the total population in India and in Mysore State for each decade from 1901 to 1971 :

Percentage of urban population to total population in India and Mysore 1901—71.

Year	Percentage of urban population	
	India	Mysore
1901	10.8	12.6
1911	10.3	11.6
1921	11.2	13.8
1931	12.0	15.3
1941	13.9	16.9
1951	17.3	23.0
1961	18.0	22.3
1971	Not available	24.3

It is interesting to notice that urbanisation has had a spurt after 1941. However, there has been a steady trend towards increasing urbanisation in the State as indeed in the country.

The rural population of each taluka, districtwise, is indicated in Appendix I given in page 33. It may be emphasised here that this obviously excludes the population of the urban areas located in the taluks.

Population of Towns

The criteria adopted for classifying an area as urban *i.e.*, as a town have been indicated earlier. These criteria are the same as were adopted for 1961. For the 1971 Census, 245 places have been classified as towns in Mysore State as against 231 in 1961. From the 1961 list 15 places were deleted while 29 places were classified for the first

time as towns giving a total of 245 towns for the 1971 Census. Places classified as towns in the 1961 Census but which have now been deleted are the following :—

Bangalore District	..	Jodi Kempapura, Kethamaranahalli, Yeshwantapura—which have all been merged in Bangalore Corporation Area.
Bijapur District	..	Sulibhavi
Dharwar District	..	Dharwar—which has now been merged in the Hubli-Dharwar Corporation Area.
Hassan District	..	Lakshmipura Sanitary Board now merged in Arsikere Municipality.
Mandya District	..	Mandya Sugar Town Area added to Municipal Area
Mysore District	..	Mirle, Saligrama, Mugur, Talkad, Agara-Mamballi.
North Kanara District	..	Gokarn, Kumbarkop
Shimoga District	..	Kargal

Twenty-nine places which have now been classified as towns are the following :—

Bangalore District	..	B.E.L. Township H.A.L. Township H.M.T. Township I.T.I. Notified Area
Belgaum District	..	Gokak Falls Notified Area Londa Mudalgi Raibag
Bellary District	..	Hampi Notified Area Hadagalli, Siruguppa, Tekkalkota
Bijapur District	..	Badami, Kerur, Muddebihal, Sindgi
Coorg District	..	Uluguli
Dharwar District	..	Alnavar, Shiggaon
Gulbarga District	..	Shahabad Notified Area Wadi Notified Area
Kolar District	..	Robertsonpet
North Kanara District	..	Yellapur
South Kanara District	..	Derebail, Pranthya, Shirva, Shivalli, Udyavar
Tumkur District	..	Ammasandra Notified Area

For purposes of analysis, towns have been classified into six classes based on population size. These are as follows :

<i>Class</i>		<i>Population size</i>
Class I	..	100,000 and above
Class II	..	50,000–99,999
Class III	..	20,000–49,999
Class IV	..	10,000–19,999
Class V	..	5,000—9,999
Class VI	..	Less than 5,000

 - CLASS V
 - CLASS VI (smallest circle)

The number of towns in the State at each Census from 1901 to 1971 and the number of towns in each class of town are indicated in the statement below :

<i>Class of Town</i>		1971	1961	1951	1941	1931	1921	1911	1901
Total	..	231	214	285	207	210	193	180	215
Class I	..	11	6	6	4	3	2	1	1
Class II	..	10	9	6	5	3	4	3	3
Class III	..	39	30	20	8	8	5	7	7
Class IV	..	99	77	57	37	26	24	16	18
Class V	..	46	57	136	87	79	63	63	74
Class VI	..	26	35	60	66	91	95	90	112

It is interesting to notice that the number of Class I towns has increased from six in 1961 to 11 in 1971.

Table No. VI at page 23 gives details of the population of the towns in the State. For convenience, the proportions of population in each size class to the total urban population in the State for 1961 and 1971 are reproduced from this table below :

<i>Class of Town</i>	<i>Proportion of population in each size class to total urban population</i>	
	1961	1971
Class I	41.26	49.34
Class II	12.58	9.32
Class III	15.96	15.99
Class IV	19.77	19.37
Class V	8.05	4.75
Class VI	2.38	1.23

Class I towns, which are technically called Cities, continue to contain the maximum proportion of urban population in the State. In 1971, these Cities contain 49.34 per cent of the total urban population in the State. The proportion of urban population in Class II towns registers a slight fall mainly due to the fact that many of the bigger towns which in 1961 came under Class II have now qualified to be classified as Class I. In particular, Gulbarga, Bellary, Bijapur, Davanagere, Bhadravati Agglomeration and Shimoga have moved from Class II to Class I in the decade 1961-71. The urban proportion in Class III and Class IV towns is approximately the same as in 1961 while there has been a decrease in the proportion in Class V and Class VI towns.

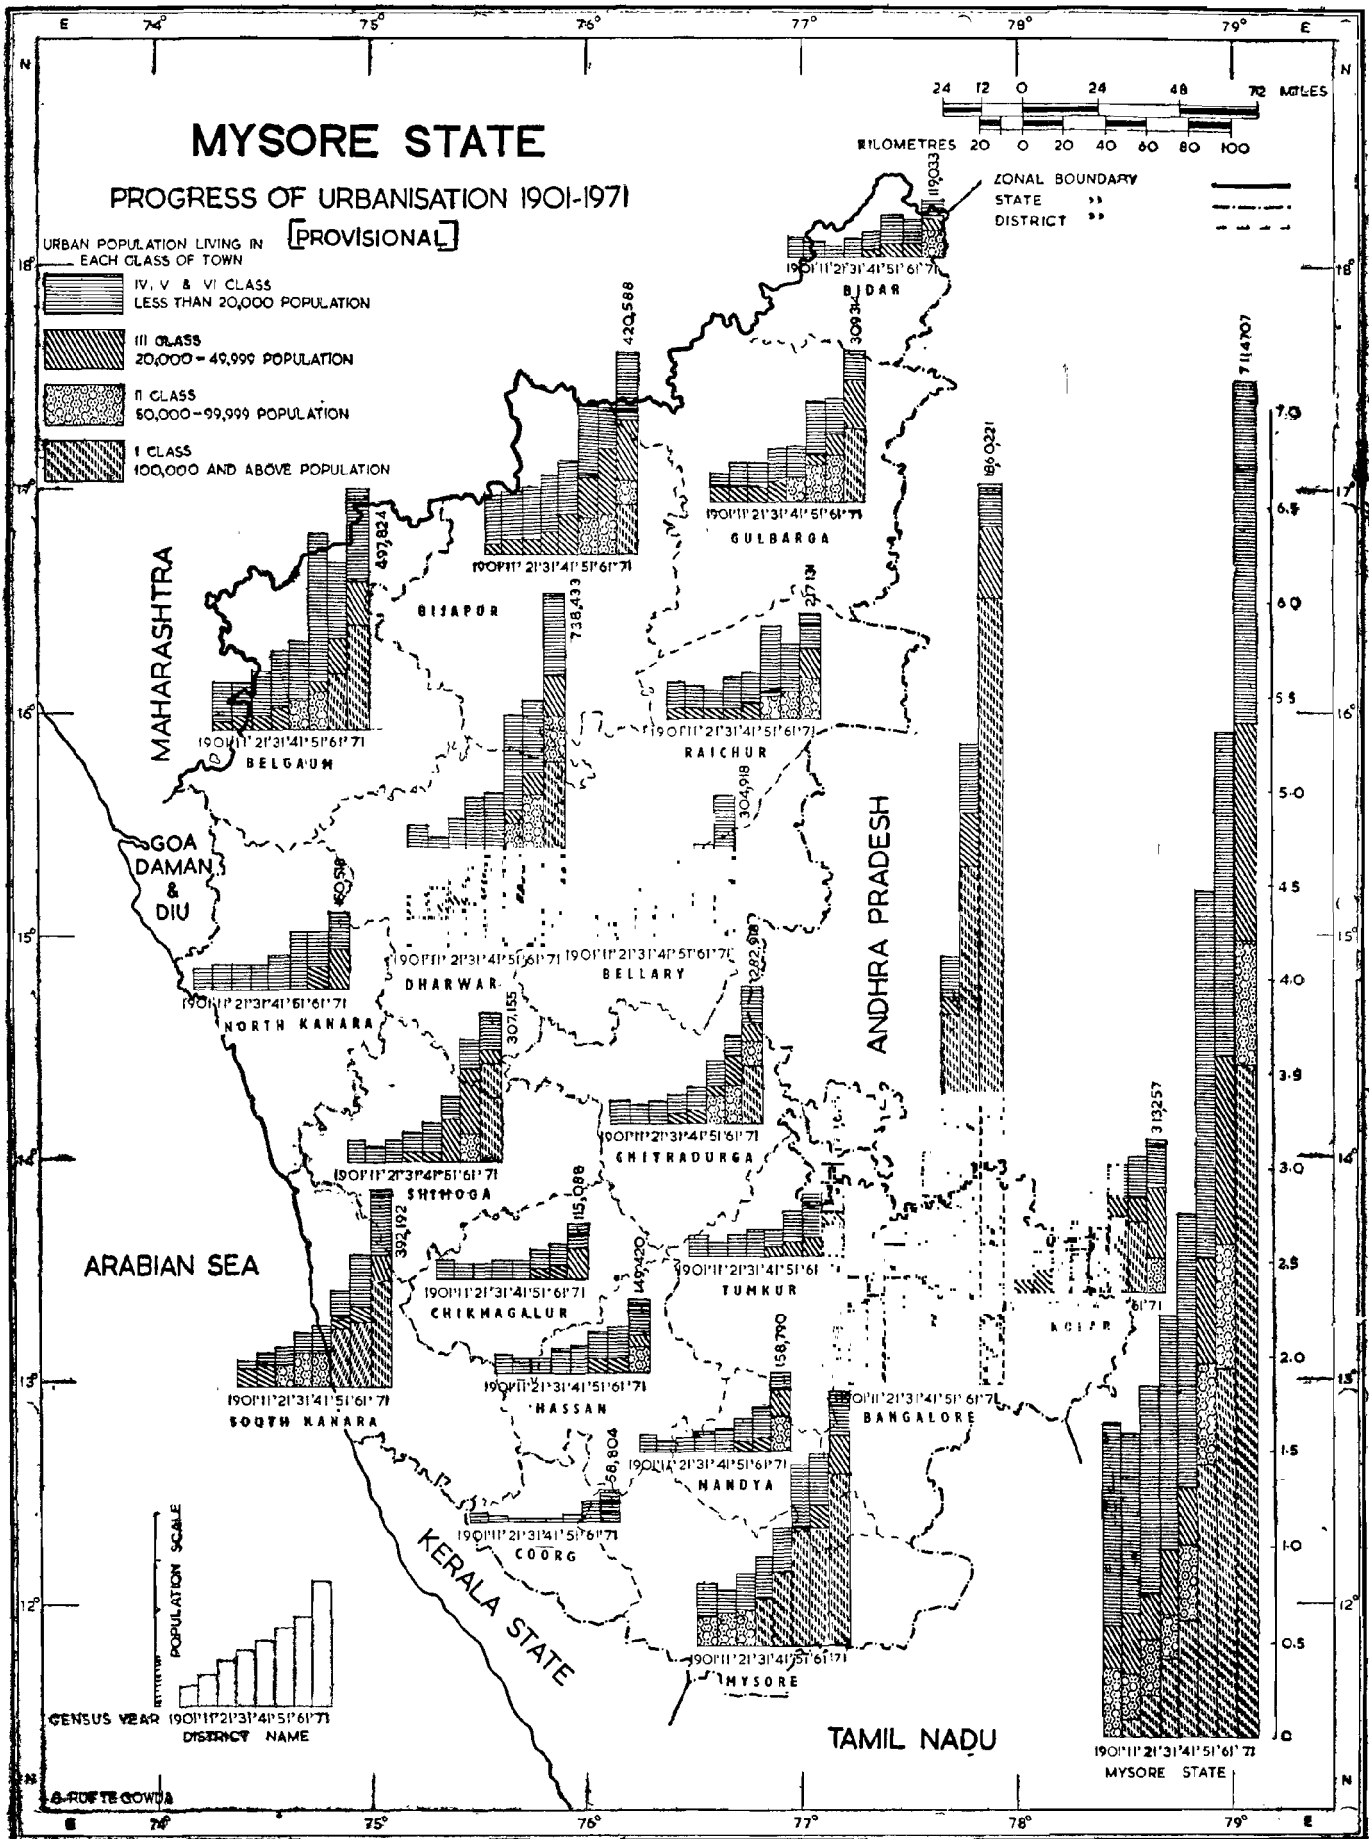

Table VI at page 23 also gives the growth rates in the decades 1951-61 and 1961-71 of the towns. For convenience, the growth rates for each class of towns is indicated below :

Class of Towns	Growth Rate	
	1951-61	1961-71
Class I	+34.08	+61.53
Class II	+70.38	+ 0.78
Class III	+42.33	+35.40
Class IV	+37.60	+32.35
Class V	-54.20	-20.39
Class VI	-26.60	-29.97

The highest growth rate in the decade 1961-71 of 61.53 per cent is registered by the Class I towns, *i.e.*, in the Cities. This would seem to indicate that it is the larger urban areas which have a faster rate of growth than the smaller urban areas. The apparently low growth rate of Class II towns is due to the places mentioned earlier qualifying to be classified in 1971 as Cities and therefore depleting the Class II group of a sizeable population. Class III and Class IV towns have maintained a fairly uniform rate of growth. The negative growth rate in the case of Class V and VI towns is mainly due to reclassification of towns. As against 57 Class V towns and 35 Class VI towns in 1961, there are 46 Class V towns and 26 Class VI towns in 1971. The total urban population of the Class V towns in 1961 was 424,118 while in 1971 it is 337,699. Similarly, the population in Class VI towns in 1961 was 125,338 while in 1971 it is 87,779.

Among the Cities in the State, Bangalore Agglomeration has the highest proportion of urban population of 23.17 per cent. Of the 11 places classified as Cities in this State, Bangalore again continues to have a predominant position. Of the total population of 3,510,447 in the 11 Cities, nearly half is in Bangalore alone. Hubli-Dharwar City is the second largest urban area in this State with 5.34 per cent of the total urban population in the State. It is closely followed by Mysore with 5 per cent. The proportion of population in each of the Cities to the total urban population in the State is indicated below (including the 1961 proportions) :

City	Proportion of population in the City to total urban population (per cent)	
	1961	1971
Bangalore Agglomeration	21.89	23.17
Hubli-Dharwar	4.72	5.34
Mysore	4.82	5.00
Mangalore Agglomeration	3.31	3.01
Belgaum Agglomeration	2.79	3.00
Gulbarga	1.84	2.05
Bellary	1.63	1.76
Davanagere	1.48	1.70
Bijapur	1.50	1.45
Shimoga	1.21	1.44
Bhadravati Agglomeration	1.25	1.42

As mentioned earlier, Gulbarga, Bellary Bijapur, Davanagere, Bhadravathi Town Group and Shimoga have moved from Class II status in 1961 to Class I status in 1971. The growth of the Cities has been discussed in Paper 1 of 1971 to which reference is invited.

As has been mentioned in Paper 1 of 1971, certain places have been merged to constitute Agglomerations. In 1961, some towns were grouped together to constitute Town Groups. The Agglomerations formed in this State for the 1971 Census and their constituent units are mentioned in Paper 1 of 1971. With the formation of Agglomerations, the actual number of urban areas would be 231. Similarly, in 1961, taking into consideration the towns merged in Town Groups, the 231 towns get reduced to 214.

The statement below indicates the proportion of population in each Class II town to the total urban population in the State :

Proportion of population in Class II towns to total urban population

<i>Class II Towns</i>	<i>Proportion of population in class II to total urban population</i>	
	1961	1971
Class II (50,000—999,99)	12.58	9.32
1. Gadag—Betgeri	1.45	1.34
2. Raichur	1.20	1.12
3. K.G.F. (Sanitary Board)	2.79	1.07
4. Mandya	0.63	1.01
5. Tumkur	0.90	0.99
6. Hospet	1.01	0.92
7. Bagalkot	0.76	0.73
8. Hassan	0.61	0.72
9. Bidar	0.62	0.71
10. Chitradurga	0.63	0.71

There are 10 Class II towns which together contain 9.32 per cent of the total urban population in the State. Of these towns, Gadag-Betgeri in Dharwar District claims 1.34 per cent of the urban population in the State followed by Raichur (1.12 per cent), K.G.F. (1.07 per cent) and Mandya (1.01 per cent). It would be necessary to indicate here that K.G.F. which was a Class I city in 1961 has now been classified as Class II because the former K.G.F. area has been divested of 78 villages which are now merged with the rural area and Robertsonpet Municipal area has also been separately constituted. This has resulted in K.G.F. being classified as a Class II town in 1971 and Robertsonpet itself being classified as a Class III town.

The growth rates in the decades 1951-61 and 1961-71 are indicated in Table VI. Among the Class II towns, Mandya has had the highest decadal increase of 116.09 per cent. In the decade 1951-1961 also, Mandya had an impressive growth rate of 57.61 per

cent. The general economic improvement particularly on the agricultural and industrial front in this district is apparently reflected in the growth of this town. Hassan town has had the next highest growth rate in the last decade of 59.55 per cent. This is closely followed by Bidar with 56.31 per cent and Chitradurga with 50.81 per cent. The bifurcation of Robertsonpet Municipal Area from K.G.F. and the merger of 78 villages in the rural area formerly included in K.G.F. result in an apparent negative growth rate in the case of K.G.F.

There are 39 Class III towns in the State as indicated in Table No. VI. The proportion of the total urban population in these Class III towns is 15.99 per cent. Three of the district headquarters, Kolar, Chikmagalur and Karwar, are Class III towns. The growth rates in the decade 1951-61 and 1961-71 in the case of the Class III towns is also indicated in Table VI. Among the Class III towns, Dandeli has the highest growth rate of 89.81 per cent over the last decade which is attributable to the industrial development in the area. The other Class III towns which have had impressive growth rates in this decade are Gangavathi, Ramanagaram, Harihar, Basavakalyan and Tiptur. Gangavathi is a place of intensive agricultural development while Harihar is an industrial area. There has also been considerable development in Basavakalyan in recent years. Tiptur is an important commercial centre. Arsikere has also registered a high growth rate of 51.27 per cent which is largely due to the inclusion of Lakshmipuram Sanitary Board area within the Arsikere Municipal area.

There are 99 Class IV towns which contribute 19.37 per cent of the urban population in the State. Included among these is the district headquarters of Mercara. Among the Class IV towns, Challakere has had the highest growth rate in the decade 1961-71 of 62.53 per cent. Among the Class IV towns, industrial and agricultural development has resulted in fairly high growth rates in the case of Kampli, Malavalli, Hiriyur, Humnabad, Krishnarajanagar, Siruguppa, Sindhnur, Manvi, Gauribidanur and Pandavapura.

There are 46 Class V towns which together contribute 4.75 per cent of the total urban population in the State. As mentioned earlier, there are 26 Class VI towns which contribute 1.23 per cent of the total urban population in the State. The main reason for the apparent negative growth rates of the Class V and Class VI towns has been indicated a little earlier.

Appendix II at page 37 gives the population of Class IV, V, and VI towns in the State for 1961-71 as also the growth rates over the decades 1951-1961 and 1961-71.

The distribution of the towns classwise in each district has been given in Appendix III at page 42. In this Appendix, the names of the towns and the provisional population as recorded in the 1971 Census have been indicated under each class. For ready reference, the statement on page 11 indicates the number of towns of each class in the State and in the districts.

Distribution of Towns by Class Size

State District	All Classes	Class					
		I	II	III	IV	V	VI
1	2	3	4	5	6	7	8
MYSORE STATE	231	11	10	39	99	46	26
Bangalore	14	1	..	4	6	2	1
Belgaum	18	1	..	3	12	1	1
Bellary	11	1	1	..	8	..	1
Bidar	5	..	1	1	3
Bijapur	17	1	1	4	11
Chikmagalur	9	2	2	2	3
Chitradurga	12	1	1	1	2	5	2
Coorg	11	1	3	7
Dharwar	18	1	1	3	12	1	..
Gulbarga	12	1	..	4	4	2	1
Hassan	11	..	1	1	4	2	3
Kolar	14	..	1	4	5	3	1
Mandya	10	..	1	..	4	3	2
Mysore	13	1	..	3	4	4	1
North Kanara	8	3	4	1	..
Raichur	10	..	1	2	4	3	..
Shimoga	12	2	..	1	2	5	2
South Kanara	14	1	..	2	7	4	..
Tumkur	12	..	1	1	4	5	1

Urban Sex Ratio

The sex ratio in the towns is given in Table No. VI. Of the Cities, Mangalore has the highest sex ratio of 996. This is in keeping with the average sex ratio of the district. The lowest sex ratio of 875 is in Bangalore City followed by Davanagere with 879. Both these Cities are important industrial areas and males apparently come in larger numbers for work.

Among Class II towns, K.G.F. has the highest sex ratio of 943. Chitradurga has the lowest.

Udipi, Coondapur and Shorapur among the Class III towns have sex ratios above 1,000 indicating a predominance of females. Among these towns, Tiptur has the lowest sex ratio (855).

Distribution of Population by Workers and Non-Workers

In the 1971 Census, two questions were asked relating to work participation. One question sought to elicit information regarding a person's main activity, that is, how he engages himself mostly. Included in this question was the classification for non-workers. A second question sought information regarding secondary work.

Table No. VII at page 27 gives the distribution of population by workers and non-workers in the State and in each of the districts. Of the total population of 29,263,334 persons, the workers constitute 10,291,184 the rest being non-workers. In other words, 35.17 per cent of the total population are workers. Of the total males in the State, 54.37 per cent are workers while 15.13 per cent of the total females in the State are workers.

The percentage of workers to total population, as indicated in Table No. VII is lower than that recorded in 1961. However, this would appear to be mainly due to the change in definition in the 1971 Census and the introduction of the concept of main activity in this Census. A person who may be primarily a non-worker but doing some other work would get recorded under secondary work for which there was a distinct question. The participation in secondary work of persons would only be available after tabulation has been completed.

The percentage of workers to the population of the district is highest in Coorg (41.06 per cent) closely followed by South Kanara and Bellary Districts. Bangalore District has the smallest percentage of workers to total population with Hassan and Shimoga Districts preceding it. The district with the highest percentage of male workers to total male population is Raichur with 57.08 per cent followed by Tumkur, Kolar, Mandya and Mysore. South Kanara District has the smallest percentage of its male population as workers. With respect to workers among the female population, South Kanara District has the highest percentage of 29.39 followed by Coorg with 25.51 per cent. Mandya District has the smallest percentage of its female population as workers (9.32 per cent). Workers have been further classified as Cultivators, Agricultural Labourers and Other Workers. The statement given on page 15 indicates the percentage of Workers and Non-workers to total population, districtwise :

Tumkur ..	1,633,238	19.69	6.18	8.73	65.40

Workers constitute 35.17 per cent of the population in the State while non-workers constitute 64.83 per cent. It must be mentioned here that the secondary work performed by non-workers will be available only after full tabulation.

Cultivators constitute 13.97 per cent of the population and Agricultural labourers 9.05 per cent. Workers other than agricultural workers constitute 12.15 per cent of the population. Among the districts in the State, Hassan has the highest percentage of population as Cultivators closely followed by Tumkur, Mandya and Kolar Districts. Bangalore District has the smallest percentage of its population working as Cultivators.

With regard to Agricultural labourers, Bellary District has the highest percentage of 15.11 per cent. It is closely followed by Bijapur (13.74 per cent), Dharwar and Raichur (13.56 per cent). Bangalore District has the smallest percentage of population working as Agricultural labourers.

With regard to other workers, Coorg has the highest percentage in this category (23.15 per cent) followed by Bangalore (19.58 per cent) and South Kanara (17.97 per cent). The district with the smallest proportion of its population working as other workers is Mandya (6.70 per cent).

Bangalore District has the highest percentage of non-workers (67.99 per cent) followed by Hassan (67.74 per cent). Coorg District has the smallest percentage of non-workers.

Distribution of Working Population

Table No. VIII at page 29 gives the distribution of the working population among categories of Cultivators, Agricultural Labourers and Other Workers. Of the total workers of 10,291,184 in the State, Cultivators constitute 4,088,722, Agricultural Labourers 2,647,851 and Other Workers 3,554,611. In other words, of the total workers in the State, 39.73 per cent are Cultivators, 25.73 per cent are Agricultural Labourers and 35.54 per cent are Other Workers. It may be mentioned in passing that the apparent fall which may be noticed in comparison with 1961 is, as mentioned earlier, due to change in concepts. It must also be emphasised here that the category of workers other than Cultivators and Agricultural Labourers is, in effect, a residual category and it should not be assumed that this refers exclusively to industrial workers. All workers who are not Cultivators and Agricultural Labourers would fall under this residual category.

Of the total male workers in the State, 44.35 per cent are Cultivators, 20.48 per cent Agricultural Labourers and 35.17 per cent Other Workers. Of the total female population in the State 22.40 are Cultivators, 45.41 are Agricultural Labourers and 32.19 are Other Workers.

Table No. VIII also gives the districtwise distribution of workers in the district as Cultivators, Agricultural Labourers and Other Workers. Among workers in the district, Hassan has the Highest percentage of Cultivators (61.33 per cent) followed by Mandya (58.72 per cent) while Coorg has the lowest (24.05 per cent). Of the total workers in Bangalore District, only 28.99 per cent constitute Cultivators. With regard to male workers who are Cultivators, Hassan has the highest percentage of 65.53 per cent followed by Mandya with 63.42 per cent. Coorg District has 27.28 per cent of its total male workers as Cultivators. With regard to female workers, 38.50 per cent constitute Cultivators in Kolar District which has the highest percentage among all the districts in the State. Bidar District has 9.90 per cent of its female workers as Cultivators. This is the lowest percentage among the districts in the State.

Of the total workers in a district working as Agricultural Labourers, Bellary has the highest percentage of 39.39 per cent followed by Bijapur (38.47 per cent). The lowest percentage of Agricultural workers to total workers is in Bangalore District (9.86 per cent). The highest percentage of male Agricultural Labourers to total workers is in Bellary District (30.92 per cent) followed by Bijapur (30.69 per cent), Bidar (29.97 per cent) and Dharwar (29.51 per cent). The lowest percentage is in Bangalore District (8.36 per cent) preceded

by Hassan (9.85 per cent). With regard to female Agricultural Labourers, the highest percentage of such workers to total workers is in Dharwar District (68.56 per cent) followed by Bijapur (65.52 per cent) and Bellary (63.56 per cent). The lowest percentage is in Bangalore District (18.90 per cent) preceded by Hassan (18.93 per cent).

Workers other than Cultivators and Agricultural Labourers constitute 34.54 per cent of the total workers in the State. The highest percentage of such workers to total workers is in Bangalore District (61.15 per cent) followed by Coorg (56.39 per cent), South Kanara (46.31 per cent), North Kanara (45.55 per cent), Chikmagalur (43.99 per cent). Mandya District has the smallest percentage of other workers to total workers (20.20 per cent) preceded by Raichur (24.31 per cent). The high percentage of workers other than Cultivators and Agricultural Labourers to total workers in Bangalore District is a result of industrialisation in and around Bangalore City. The high percentages in Coorg, South Kanara, North Kanara and Chikmagalur districts are mainly due to plantation activity since plantation workers would also be classified under this category.

Among male workers, the highest percentage of Other Workers is in Bangalore District (60.58 per cent) followed by Coorg (54.58 per cent). The lowest percentages are in Mandya (18.81 per cent) and Tumkur (24.08 per cent). Among female workers, the highest percentage of Other Workers is in Bangalore District with 64.60 per cent followed by Coorg (60.67 per cent). The district with the lowest percentage is Belgaum (17.88 per cent) preceded by Raichur (18.86 per cent).

If the percentages of Cultivators and Agricultural Labourers are considered together, it will be noticed that except in Bangalore District, the proportions are approximately that in 1961. Cultivators and Agricultural Labourers, in other words Agricultural workers, in 1961 constituted 70.55 per cent of total workers. In 1971 they constitute 65.46 per cent of total workers. In Bangalore District, Agricultural workers in 1961 were 50.48 per cent of the total workers while in 1971 they are only 38.85 per cent of total workers. However, as against this, it will be noticed that there is a considerable increase in the percentage of workers other than Agricultural workers in this district over 1961. Thus, activities which are not classified under Cultivation for Census purposes tend to acquire predominance in this district.
