## P R E F A C E

It gives me great pleasure in presenting the provisional results of the 1971 centenary Census in the form of Paper I. This is in fact the first publication of the 1971 Census based on data collected between March 10-31, 1971. But I must hasten to add that we have already brought out a Habitation Atlas of all the villages and hamlets in Madhya Pradesh depicting availability of various facilities and institutions, or the lack of it, in the abadi area of a village or hamlet. The Habitation Atlas is, however, for limited official use.

The figures given in this Paper, which depict the position as on the sunrise of April 1, 1971, are termed as "provisional" not because we anticipate any large scale variations in the final figures, but because the data compiled very recently has not yet been subjected to a detailed verification by way of a cent per cent manual sorting of all the 41.7 million individual slips. Further, a technical scrutiny in the form of a post-enumeration check in a limited sample of 290 blocks for coverage error and 50 blocks for coverage as well as content error has also yet to take place. Here it would not be out of place to mention that the post-enumeration check conducted after the 1961 Census Operations revealed an error of only 0.02 per cent

and the final figures differed from the provisional figures by only 0.07%. It would thus be clear that the figures presented in this Paper, though termed as provisional, are a reliable guide to know changes that have come about in the rate of population growth, density of population, literacy etc. in the past decade.

Before concluding this brief note, I would like to express my sincere thanks to the Controller, State Government Press, and his staff for completing in time the printing of the cover page, the diagram and the maps and to all the Charge Officers in the 43 districts of the State for expeditious despatch of information abstracted from the various census records without which publication of this Paper in about a fortnight's time from the completion of Census Operations would have been very difficult.

Bhopal,

April 20, 1971

A. K. Pandya

## INTRODUCTORY NOTE

### FIGURES AT A GLANCE

A. POPULATION OF MADHYA PRADESH	TOTAL	41,650,684
	MALES	21,438,864
	FEMALES	20,211,820
B. DECAENNIAL POPULATION GROWTH RATE 1961-71		28.66 %
C. DENSITY OF POPULATION		94 per sq. km.
D. SEX-RATIO		943
E. LITERACY RATE	TOTAL	22.12 %
	MALES	32.76 %
	FEMALES	10.84 %
F. PROPORTION OF URBAN POPULATION TO TOTAL POPULATION		16.31 %
G. WORK PARTICIPATION RATE (i.e., PROPORTION OF ECONOMICALLY ACTIVE WORKERS)	TOTAL	37.3 %
	MALES	53.8 %
	FEMALES	19.8 %

The conclusion of the 1971 Census on 31-3-1971 marks the centenary of Census taking in our country. Detailed compilation of the data thrown by the Census will take quite sometime. As the final figures vary only marginally from the provisional figures, it was decided by the Census Organisation to release the provisional figures as early as possible so that its use can be made of immediately by the data-users. This paper is a modest effort in that direction.

### SIZE AND DISSEMINATION

2. The provisional population of Madhya Pradesh as at the sunrise of April 1, 1971, stands at 41,650,684. In other words, there has been a net increase of 9,278,276 persons during the decade 1961-71.

3. The pie-chart gives an idea about the dispersal of population among the 43 districts of the State. Raipur displaces Bilaspur as the most populous district in the State, accounting for 6.27 per cent of the total population of the State. Bilaspur actually stands relegated to the third place, conceding the second place to Durg district. The reasons for this change in position of the three most populous districts of the State are not far to seek. Rapid industrialisation in Raipur and Durg districts in the wake of fuller utilisation of the capacity of the Bhilai Steel Plant (Durg district), coming up of ancillary units (Durg and Raipur districts), establishment of Cement factory at Mandhar (Raipur district) and Railway Wagons Repairs Workshop at Raipur, coupled with opening of large transit camps for displaced persons from East Pakistan in Raipur district has resulted in a more rapid growth of population in Raipur and Durg-districts than in Bilaspur district. Datia continues to be the smallest district in the State, accounting for only 0.61 per cent of the total population.

#### GROWTH-RATE

4. The State, which holds the first place among the 29 States, Union Territories and Other Areas of the country from the point of view of area, is climbing upwards in the matter of ranking by size of population also. Edging out Tamilnadu to the seventh place, the State has shown a growth rate of 28.66 per cent during the period 1961-71 which is lower than only the States of Nagaland, Assam, Haryana, Jammu & Kashmir and Gujarat. It is higher by 4.09 per cent than the all-India average of

24.57 per cent and by 4.49 per cent than the State average of 24.17 per cent during the period 1951-61. The reasons of a higher rate of growth in the past decade than what was witnessed during the period 1951-61, despite intensive efforts of the family planning organisation, will no doubt have to be examined in detail. The phenomenon is visible in 18 other States, Union Territories and Other Areas also. One reason could be a lower death rate and higher expectancy of life at birth. Migration from outside may also be partly responsible.

5. The rate of growth for the rural population works out to 24.75 per cent and for urban population to 46.85 per cent. The highest growth rate in the rural areas is recorded by Raisen district followed by Sidhi district and the lowest growth rate is recorded in Surguja district. The explanation for Raisen district having the highest growth-rate in the rural sector perhaps lies in inmigration of harvesting labourers. The plausible reason in respect of Sidhi district appears to be inmigration due to large scale working of Collieries by the NCDC and laying of the railway line in the Singrauli coal complex. As for Surguja district having the lowest growth rate, the explanation perhaps lies in treating new areas as towns as well as out-migration. In all, 25 districts have recorded a growth-rate higher than the State-average of 28.66 per cent.

6. A study of the map showing the decennial population growth in the State would reveal that the districts showing a growth-rate higher than the State average of 28.66 per cent

are all contiguous, the highest growth-rates being recorded in areas around the capital city of Bhopal (Sehore district) and the highly industrialised city of Indore.

#### DENSITY OF POPULATION

7. Situated in the heart of the country, with an area spreading over 14.4 thousand sq.kilometers, this largest State in the country has a density of population of only 94 per sq. kilometer which is almost half of the all-India average of 182. Only the States of Nagaland (31), Himachal Pradesh (62) and Rajasthan (75) have a lower density of population.

8. Mandsaur district bordering Rajasthan has a density of population exactly equal to the State-average of 94. Nineteen districts have a density of population lower than the State-average and the remaining 23 districts have a density of population above the State-average. Indore (265) and Bastar(39) continue to be the districts having the highest and lowest density of population, respectively.

9. The density of population of the State and the districts for 1961, as given in Table I have been worked out on the basis of the area figures recently intimated by the Registrar-General's office so as to make the figures comparable with the position worked out for 1971. In view of this, the 1961 density has been shown as 73 as against 74 given at page 51 in Paper I of 1971 of Series - 1, India.

10. The map of density of population shows an interesting position. The Narmada basin districts have a density of population lower than the State-average, while all the seven

divisional headquarter districts have a density of population higher than the State-average.

#### SEX RATIO

11. The sex-ratio, i.e., the number of females per 1,000 males has gone down in the State during the past decade from 953 in 1961 to 943 in this Census. The trend is in keeping with the all-India picture where the average has come down from 941 to 932. But it is significant to note that although females continue to be less than males in all the States, the sole exception being Kerala, the ratio has shown an upward trend in the States of Assam, Haryana, Himachal Pradesh, Jammu & Kashmir, Mysore, Punjab, Rajasthan and West Bengal. In other words, more female births took place in these States during the period 1961-71.

12. The sex-ratio is higher than the State-average in the districts of Satna, Rewa, Shahdol, Sidhi, Jhabua, Dhar, Khargone, Betul, Mandla, Chhindwara, Seoni, Balaghat, Surguja, Bilaspur, Raigarh, Durg, Raipu and Bastar. Raigarh displaces Raipur as the district having the largest number of females per 1,000 males, viz., 1,009. A study of the districts having a higher sex-ratio than the State-average would show that it is one continuous belt from Satna to Jhabua, encompassing the entire north-eastern and southern parts of the State, except Khandwa district, where also the sex-ratio of 936 is only slightly below the State-average of 943. The rice-growing districts of Balaghat, Raipur, Bilaspur and Raigarh continue to show a

preponderance of females over males. The reasons for this phenomenon will have to be examined in detail; may be the answer lies in the climate and food habits of the people of these areas.

13. There is a striking resemblance in the matter of sex-ratio in respect of the position existing in the northern States of the country and northern parts of this State. The northern States of the country, viz., Jammu & Kashmir, Punjab, Haryana, Rajasthan and Uttar Pradesh show a sex-ratio varying between 868 to 914, i.e., anything from 27 to 73 points below the all-India average; similarly, the northern districts of this State have recorded a sex-ratio varying between 838 to 882, i.e., less than the State-average by 60 to 104 points.

#### LITERACY

14. The number of literates, i.e., those having ability to read and write, has gone up in the State by 37.42 lacs. In terms of percentage, the number of literates have gone up from 17.13 per cent to 22.12 per cent. The increase in the number of literates during the decade thus works out to 29.13 per cent. Here it must be remembered that the figures are for all age-groups and in the Census everyone in the age-group 0-4 years have been treated as illiterate. In other words, the percentages of literacy will work out higher when those in the age-group 0-4 years are not

considered. Literacy among the males has recorded an increase of 5.73 per cent; the rate of increase among the females is only 4.11 per cent.

15. Out of 43 districts, 18 districts have a rate of literacy above the State-average of 22.12 per cent. Similar was the position at the time of the 1961 Census. But Dewas district, which had a rate of literacy higher than the State-average in 1961, is now below the State-average and its place has gone to Betul district which had a lower rate of literacy in 1961 than the State-average. Indore district with a male literacy of 55.75 per cent and female literacy of 31.42 per cent continues to be at the top. Jhabua and Sidhi districts continue to be at the bottom in respect of male and female literacy, respectively.

16. The State has no doubt moved forward in the field of literacy; it now occupies the twentythird place as against the twentyfifth place at the conclusion of the 1961 Census. But a lot of leeway has yet to be made and the progress, if any, of the Adult Education Schemes will have to be made by detailed sorting and analysis of the slips, age-group-wise.

#### RURAL URBAN DISPERSAL

17. Out of the total population of 41.7 millions, 83.69 per cent live in the rural areas as against 85.71 per cent in 1961. The increase of 2.02 per cent in urban population

466

prima-facie appears to be due to increase in the number of towns from 219 to 248. The definition of a town adopted this time was the same as in the 1961 Census. All places having an urban body, irrespective of the size of population, were recognised as towns. Further places having a population of 5,000 and above with 75 per cent of the adult male population depending on non-agricultural pursuits for their livelihood were also treated as towns. The concept of urban agglomeration, though new on an all India basis, corresponds wholly with the town-group concept of 1961 Census adopted at the all India level and what was treated as non-municipal urban areas in this State. On the basis of the figures thrown by the 1961 Census, three towns were de-classified but, keeping in view the definition of a town referred to above, 32 new places were treated as towns in consultation with the State Government. The new towns of the 1971 Census account for a population of 2.12 lacs out of a net increase in urban population of 21.67 lacs. The urban population of towns of 1961 Census (excluding that of de-classified towns) was 4,608,824. When one considers the urban growth-rate of 46.85 per cent, it becomes abundantly clear that the increase in the total urban population of the State is primarily due to addition of new areas as towns and not as a result of fresh movement from rural areas to the towns. This analysis is further borne out by the fact that whereas the State urban growth-rate was 47.70 per cent in 1961,

it now works out to 46.85 per cent. As against this, the rural growth-rate has gone up from 24.17 per cent to 24.75 per cent.

18. In the rural sector, 15 out of 43 districts have recorded a growth-rate lower than the State average of 24.75 per cent. Districts recording a very low growth-rate are Shivpuri, Shahdol, Balaghat, Surguja and Bilaspur. At the other end, i.e., districts recording a very high growth-rate are Guna, Satna, Sidhi, Ujjain, Dhar, Indore, Vidisha, Sehore, Raisen, Betul, Sagar and Jabalpur. Here it must be remembered that since the Census Operations were postponed by a month due to the mid-term poll for the Lok Sabha and commenced around the festival of 'holi', there is a slight distortion in the growth-rates of certain districts due to in-migration or out-migration of harvesting labourers. The extent of distortion will have to be gone into in detail at the time of preparation of migration tables.

19. Twentyseven out of 43 districts have recorded a growth-rate lower than the State-average of 46.85 per cent in the urban sector. Abnormally low growth rates have been recorded in the districts of Datia, Chhatarpur, Mandsaur, Dhar, Rajgarh and Raigarh whereas Shivpuri, Panna, Rewa, Shahdol, Sidhi, Sehore, Chhindwara, Surguja, Durg, Raipur and Bastar have registered a very high growth-rate. The explanation for high growth-rates in the above mentioned districts lies in the fact that new places have been recognised as towns in these districts, except Rewa and Sidhi which

are divisional and district headquarter towns, respectively and seem to have benefitted from opening of new institutions and offices.

#### GROWTH OF CITIES AND TOWNS

20. The results of the 1961 Census showed that there were eight cities having a population of one lac and above. Taking the town groups into consideration, these eight cities actually accounted for 14 out of 219 towns. The provisional figures this time show that there are 11 cities with a population of 1 lac and above accounting for 17 towns out of 248. The new additions in Category I are Burhanpur, Ratlam and Bilaspur. Indore continues to be the biggest city in the State with a population of 572,622, followed by Jabalpur whose population is 533,751. Gwalior with a population of 406,755 has a chance of being classified as a B 2 city, having crossed the 4-lac mark.

21. As against 7 towns (inclusive of group towns) in Class II (population between 50,000 to 99,999) in 1961, there are now 11 towns. Excluding the 3 towns of 1961 which have now moved to Class I, we find that nine towns have moved up from Class III to Class II. These are Shivpuri, Nowrangpur, Cantonment, Rajnandgaon, Chhindwara, Dewas, Satna, Rewa, Damoh and Mandsaur. All these towns are likely to become eligible for categorisation as Class 'C' cities.

22. In Class III (population between 20,000 to 49,999), there are now 36 towns as against 30 after the 1961 Census. This leaves 184 towns in Classes IV to VI as against 168 in 1961.

WORK PARTICIPATION RATE

23. The proportion of economically active workers to total population has gone down from 52.3 per cent to 37.3 per cent. The percentage for male workers stands at 53.8 per cent; as against this, only 19.8 per cent females are active workers.

24. The decrease of 15 per cent in the number of economically active workers is perhaps due to change in the definition of 'worker'. In 1961, only one question was canvassed to determine whether a person a worker or a non worker. But this time two questions were there and only those persons have been recorded as workers who had spent major part of their time in an economically active work. Persons engaged in an economically active work for only a small part of their time have been recorded as 'non worker' in the appropriate category in answer to the question on main activity. The economically active work done by them has been entered in the question relating to secondary work. Therefore, a fuller picture of persons engaged in economically active work, wholly or partly, would be available only after complete sorting of the slips in the next few months.

25. There are only 15 districts having a percentage of active workers higher than the State-average. Durg district, where the Bhilai Steel Plant is located, has the highest percentage of workers. At the bottom lies Bhind district with 28.6 per cent.

Note:- \* Excluding Jawar and Sentinel.

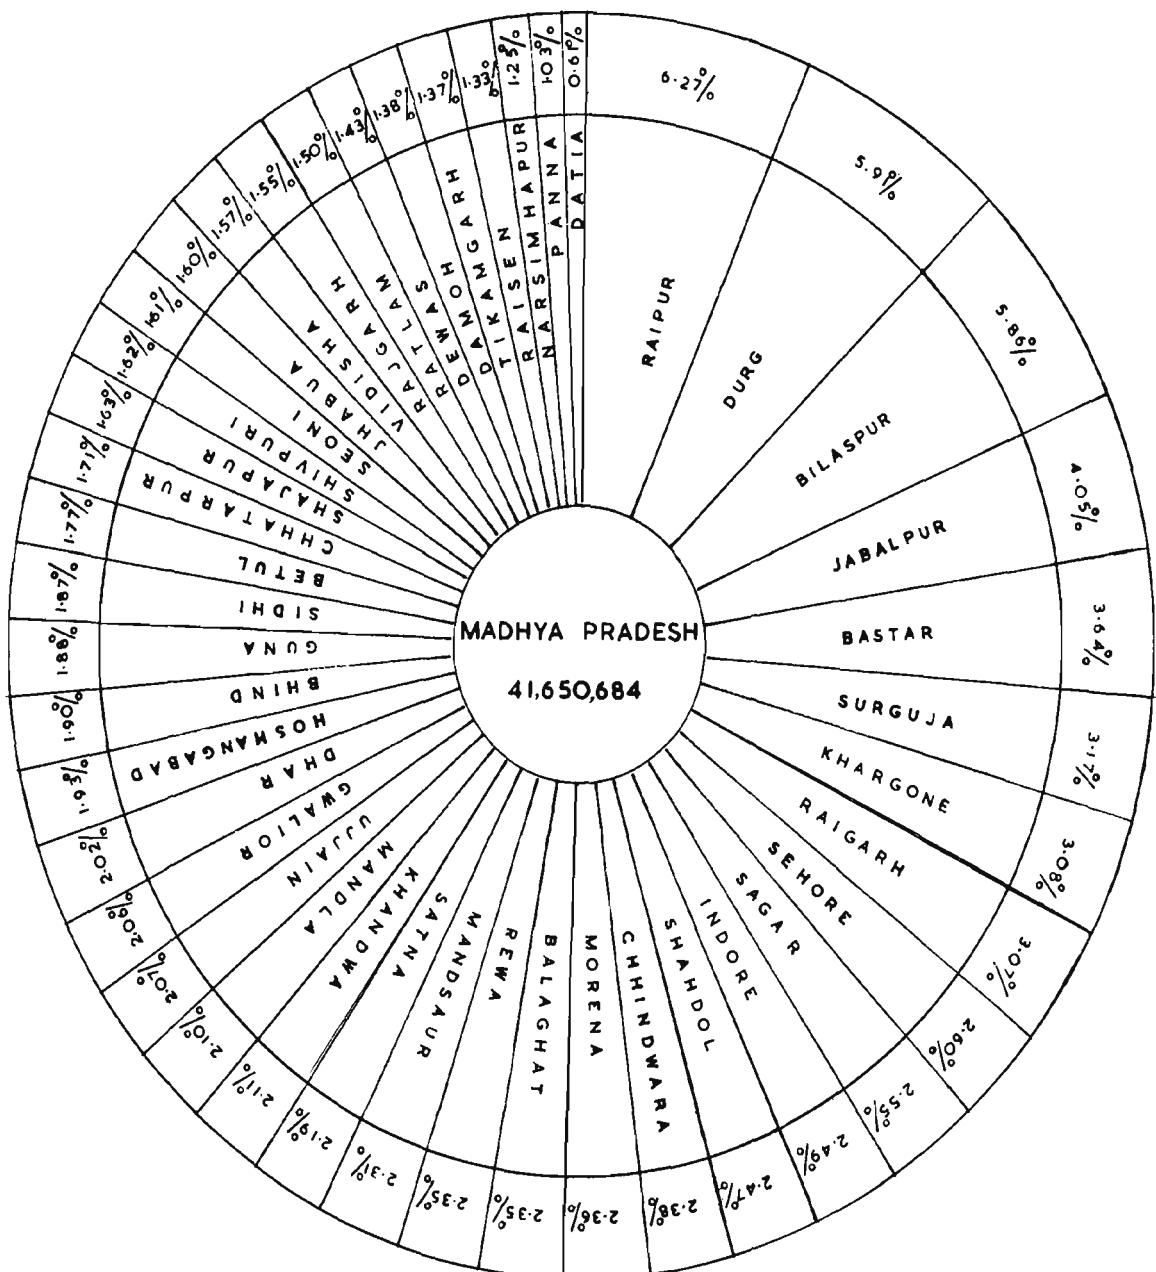

\*\* The figures given in columns 3, 5 and 6 have undergone a slight change on account of revised figures communicated by some districts after compilation of figures by the Registrar General, India, for initial release to the Press. As a result of it, the population of the State has gone up by 200,055 necessitating upward revision of rate of growth and density of population. The correct figures are indicated in the Introductory Note - Figures at a glance.
