ACKNOWLEDGEMENTS

The Standard Urban Area (SUA) is a new concept developed in the 1971 census for the tabulation of certain urban data. This supplement, a companion volume of part II-A—General Population Tables of Maharashtra published in October 1972, contains Table A-V and its Appendix which present the census data of 25 SUAs in Maharashtra.

Table A-V gives the basic data like area, civic status, density of population, number of occupied residential houses, houseless population, institutional population and total population for each SUA and its components. It also gives the 1951 and 1961 census populations of each of these units. The Appendix to Table A-V presents the 1971 primary census abstract for the SUAs and their components.

The demarcation of SUAs in Maharashtra was worked out by the state town planning and valuation department, the central town and country planning organisation, New Delhi, and the office of the Registrar General, India. I am grateful to these departments for their co-operation in this new venture.

I am very grateful to Shri K. K. Chakravorty, Assistant Registrar General, and the staff of the Central tabulation division of the Registrar General's office, New Delhi, for scrutiny of the tables and for their valuable suggestions.

In the Maharashtra census office, Shri D. V. Rangnekar, Deputy Director (HQ), rendered valuable assistance in the delination of the SUAs as well as in the tabulation of the data and preparation of the notes. Technical assistance for tabulation was provided by Shri A. W. Mahatme, Assistant Director. I am grateful to Shri R. N. Pongurlekar, Kumari V. I. Nimbalkar, Tabulation Officers, and S/Shri P. G. Abhyankar, B. V. Pawar, D. G. Katre and C. S. More, Statistical Assistants for their valuable assistance in ensuring accuracy of the data compiled. Shri S. Y. Pradhan, Artist, and the staff of the cartography unit prepared the maps included in this volume. Shri C. M. Kane looked after the printing arrangements.

My thanks are due to Shri A. V. Bodas, Manager, and Shri Y. Viswanathan, Assistant Manager, Government of India Press, Nasik, for their co-operation in the printing of this volume.

Table A-V—Standard Urban Areas	10
Appendix to Table A-V—Primary Census Abstract of SUAs	26
Maps of SUAs	101

INTRODUCTION

The 1971 census introduced the concept of the 'standard urban area' for tabulation and presentation of certain data about urban areas in the country. It marked a great improvement over the concept of town group introduced for the first time at the 1961 census. For various types of analysis, the entire area in and around a city or a large town which forms an integrated economic and social system needs to be considered as a unit for presentation of statistical data. In the past, difficulties were being experienced in assembling data concerning population characteristics including labour force for urbanisable areas around cities and towns in the country which would constitute a well-defined compact unit around the core city or town. The 1961 concept of 'town group' provided data for urban areas both in terms of individual towns and cities and also in terms of clusters of population called town groups. The aim was to identify functionally linked urban areas, urban spills beyond the administrative boundaries and metropolitan conurbations. The town group was made up of independent urban units not necessarily contiguous to one another but to some extent interdependent. Although the town group indicated closely linked areas in terms of socio-economic activities it suffered from exclusion of contiguous rural areas around the city/town which could be conceived as potentially urbanisable area. The varying definitions and criteria adopted for delimitation of the town group did not ensure uniformity of concept and it did not envisage a contiguous tract of land around the city/town. Moreover, data for the town group were rendered incomparable from census to census as the administrative boundaries of the city/town changed and the intermediate areas were left out of account. □

The concept of standard urban areas was evolved by the Registrar General, India, in collaboration with the Town and country planning organisation and other interested institutions and adopted at the 1971 census for the presentation of urban statistics on a uniform basis while ensuring at the same time comparability of census data from one decade to another and with similar data available from other countries.

The essential features of a 'standard urban area' are (i) it should have a core town of a minimum population size of 50,000, (ii) the contiguous areas made up of other urban as well as rural administrative units should have close mutual socio-economic links with the core town and (iii) the probabilities should be that this entire area would get fully urbanised within a period of two to three decades. The aim is to provide comparable data for a definite and well-demarcated areas of urbanisation continuously for three decades.

The standard urban area may be defined as the projected growth area as it would be in 1991 of a city or town having 50,000 or more population in 1971, the area being delineated in a manner that takes into account not only the towns and villages which will get merged in it but also the intervening areas which are potentially urban. Such a tract will include all extra municipal urban growth such as the suburbs (industrial and residential), railway colonies, civil lines and cantonments and also such of those villages and towns which are likely to be urbanised by 1991. The SUA will thus remain as a statistical reporting unit during three successive censuses, irrespective of the changes in the boundaries of the local administrative units within the tract. The SUA is identifiable by the administrative units that it encompasses, namely, city, town or village. The boundaries of the SUA are the administrative boundaries of the peripheral units.

Standard urban areas include all areas which have any or all the following characteristics: (a) permanent urban land use; (b) intensive interaction with the urban centre as reflected in commutation for the purposes of work and secondary education facilities, extension of city bus service, sale of articles like milk, dairy products, vegetables (other than those transported by rail or truck) and purchase of foodgrains, clothes and general provisions by the consumers directly; (c) anticipated urban growth as a result of locational decisions relating to industry, market, transport and communication, administrative and servicing functions, and (d) existence of big villages with a large proportion of the working force engaged in non-agricultural industrial categories.

The work relating to the demarcation of the standard urban areas in Maharashtra as in other parts of the country was jointly carried out by the Town and country planning department in the state, the office of the state Director of census, the Central town and country planning organisation, New Delhi, and the office of the Registrar General, India.

There are in all 25 SUAs delineated in Maharashtra. They are (1) Greater Bombay—Thana, (2) Bhiwandi, (3) Kalyan—Ulhasnagar, (4) Nasik, (5) Malegaon, (6) Dhulia, (7) Jalgaon, (8) Bhusawal, (9) Ahmednagar, (10) Poona, (11) Satara, (12) Sangli, (13) Sholapur, (14) Kolhapur, (15) Ichalkaranji, (16) Aurangabad, (17) Jalna, (18) Nanded, (19) Khamgaon, (20) Akola, (21) Amravati, (22) Yeotmal, (23) Nagpur, (24) Kamptee and (25) Chandrapur. A statement containing summary data on each of the 25 SUAs is published at the end of this introductory note (page 3).

Every standard urban area for which data are presented in table A-V for standard urban areas, is a compact fixed territory, which represents a potential urbanisable area. Not all of its components have been treated as urban for the 1971 census. Some of them are as yet rural but are considered potentially urbanisable in the near future. Data have been, therefore, presented in table A-V not only for each SUA as a whole but also for each of its components. The components have been grouped as urban or rural according to their classification in the 1971 census. Totals have been struck for each of the two groups of components. The population figures presented in respect of an urban component for the past census 1951 and 1961 in table A-V relate not merely to the urbanised area of the component at the respective census but to the entire area which it now represents in 1971, even though part of it might have been rural at that census. This is a sequel to its being treated as a definite fixed territory which is to be taken as a statistical reporting unit for censuses upto 1991. Since table A-V has to provide comparable census data for each SUA and also for each of its components right from 1951 to 1991, there is a need to adjust all data for past censuses to the present jurisdiction of the unit.

There is thus a slight difference in the principle of presentation of data for cities/towns in table A-V and table A-IV which traces the development of the urban population of each unit from 1901 to 1971. In respect of a town or city which acquired territory by merger at an intermediate census or in 1971, the population figures shown in table A-IV for censuses prior to the one at which the territory was acquired relate only to such portion of it as was urban at the respective census and not to its entire area according to the 1971 jurisdiction. In other words, the population of only the urbanised area at the respective census is presented in table A-IV against any unit. In table A-V data for earlier censuses relate to the entire area of the component as in 1971. Because of this difference the population figures for 1951 and 1961 given in table A-V will in the case of certain urban units which have expanded after 1951 as a result of merger of rural areas will be found to be higher than the figures for those censuses shown against these units in table A-IV.

The term 'urban agglomeration' used for presentation of data for urban areas at the 1971 census has a different connotation. It takes into its fold the core town/city and the auxiliary units of habitation, rural or urban, which are in close vicinity of the town/city and are deemed to be the extremities of the towns/cities in the shape of outgrowths or suburban satellites. Such agglomerations are subject to change from census to census and can not provide a base for collection of

bench-mark statistics at any point of time as can be yielded by the areas now designated "SUAs."

This supplement contains table A-V on 25 standard urban areas in Maharashtra and an appendix to table A-V which presents primary census abstract for each SUA. In both table A-V and its appendix data are presented separately for each urban and rural components constituting the SUA and also totals for rural and urban areas. The former gives the census data in the form of areas, density (population per km²), number of occupied residential houses, houseless population, institutional population and total population for each SUA and its component units. It also shows total population of each SUA and components for the 1951 and 1961 censuses.

Appendix to table A-V provides primary census abstract for each SUA and its component units. The items are (1) area in km², (2) occupied residential houses, (3) number of households, (4) total population (including institutional and houseless population and its break by males and females), (5) scheduled castes, (6) scheduled tribes, (7) literates and educated persons, and (8) workers classified by broad economic activities. The concepts and definitions of various terms used in this appendix are the same as those of the items in the primary census abstract published in the 1971 census report "Part II-A-General population tables of Maharashtra". The explanatory note on the primary census abstract is published on pages 207 to 219 of that report.

Table A-V on SUAs in Maharashtra is also included in the above report along with other tables of A series so that all the tables of A series can be had in one volume. After publication of that report in 1972 some adjustments in the component units were found necessary in respect of certain SUAs. This has resulted in a revision of figures of population for some of the SUAs and their components. These changes are very few and do not materially change the statistics presented in table A-V. A statement showing the differences in figures of certain SUAs published in table A-V included in Part II-A report and this supplement is published on page 7.

Maps of all the 25 standard urban areas in the state are included at the end of this volume. These maps have been prepared by the cartography unit of this office in collaboration with the Town and Country planning organisation. They show boundaries of the SUAs, their rural and urban components, names of these components, their 1971 census location code numbers, national and state highways, railways, rivers, important roads, built up areas in municipal towns etc.

TABLE A-V
STANDARD URBAN AREAS

A-V—STANDARD URBAN AREAS

[(1) The grouping of the components of a standard urban area under the heads 'urban' and 'rural' has been done with reference to their status for the 1971 census. It does not necessarily follow that each urban component was urban—wholly or partly—in 1951 and 1961 also, for which census population figures have been presented in columns 15 and 16.

(2) Towns treated as such for the first time in 1961 which continue as towns in 1971 have been marked with an asterisk(*).

(3) Towns treated as such for the first time in 1971 have been shown in *italics*.

(4) Population figures for the past censuses (*vide* columns 15 and 16) in respect of an urban component represent data adjusted for the 1971 jurisdiction of the unit ignoring the fact whether it was rural—partly or wholly—at the respective census. Please also see the explanatory note to this table.

(5) Figures in bracket in column 2 indicate code Nos of the Village.]

State/District	Standard urban area and component units	Area km ²	Population per km ²	Number of occupied residential houses	Houseless population			Institutional population			Total population (including institutional and houseless population)			Population during 1951-71
