

SRS BULLETIN

SAMPLE REGISTRATION SYSTEM

OFFICE OF THE REGISTRAR GENERAL, INDIA

VITAL STATISTICS DIVISION, WEST BLOCK 1, WING 1, 2ND FLOOR, R. K. PURAM, NEW DELHI-110 066

About SRS

The Sample Registration System (SRS) provides reliable annual estimates of Infant mortality rate, birth rate, death rate and other fertility & mortality indicators at the national and sub-national levels. It is a large-scale demographic survey conducted every year by Office of the Registrar General, India in all States/Union Territories.

Abstract

This Bulletin presents the estimates of Birth Rate, Death Rate, Natural Growth Rate and Infant

Mortality Rate (IMR) for the year 2019 for India and its States/Union Territories. The 'Bigger States/Union Territories' in this Bulletin are those having population more than 10 million as per Census 2011.

In 2019, the birth rate for the country has declined to 19.7 from 20.0 in the year 2018, whereas the death rate has declined to 6.0 in the year 2019 from 6.2 in the year 2018. The Infant Mortality Rate has decreased to 30 in the year 2019 from 32 in the year 2018.

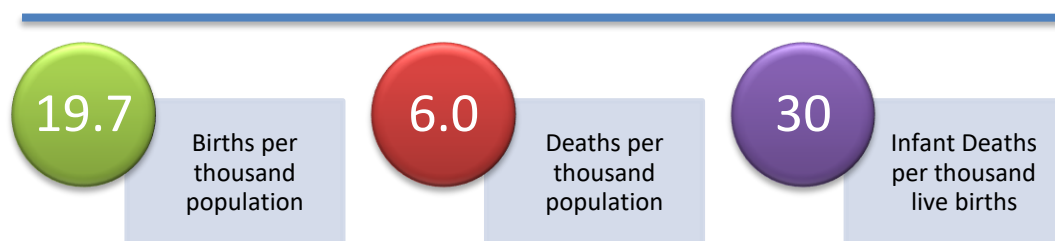

Figure 1: India at a glance, 2019

List of Tables

1. Estimated Birth rate, Death rate, Natural growth rate and Infant Mortality Rate, 2019
2. Ninety five percent confidence limits (lower and upper limits) for Birth Rate, 2019
3. Ninety five percent confidence limits (lower and upper limits) for Death Rate and Infant Mortality Rate, 2019
4. Death rate by sex and residence, 2019
5. Infant mortality rate by sex and residence, 2019
6. Number of sample units and population covered; India, States and Union Territories, 2019

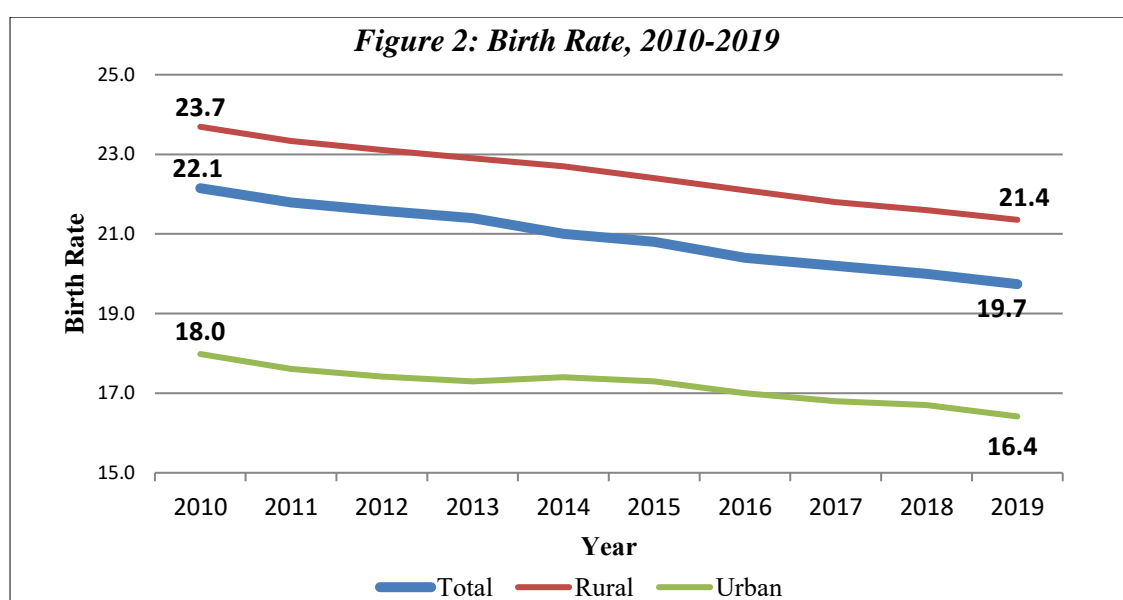

Birth Rate

Birth Rate is a crude measure of fertility of a population and is a crucial determinant of population growth. It gives the number of live births per thousand population in a given region and year.

The birth rate at all India level has declined drastically over the last four decades from 36.9 in 1971 to 19.7 in 2019. The rural-urban differential has also narrowed over these years. However, the birth rate has continued to be higher in rural areas compared to urban areas in the last four decades. *Figure-2* below shows the level of estimated birth rate for India over the last ten years. Birth rate has declined by about 11% in the last decade, from 22.1 in 2010 to 19.7 in 2019. The corresponding decline in rural areas is 23.7 to 21.4, and for urban areas it is from 18.0 to 16.4.

In 2019, the birth rate for India varies from 16.4 in urban regions to 21.4 in rural regions. The highest birth rate has been recorded in Bihar (25.8) while the lowest in Andaman & Nicobar Islands (11.0).

In 2019, the highest Birth Rate has been observed at 25.8 in Bihar, whereas Andaman & Nicobar Islands has the lowest Birth Rate of 11.0.

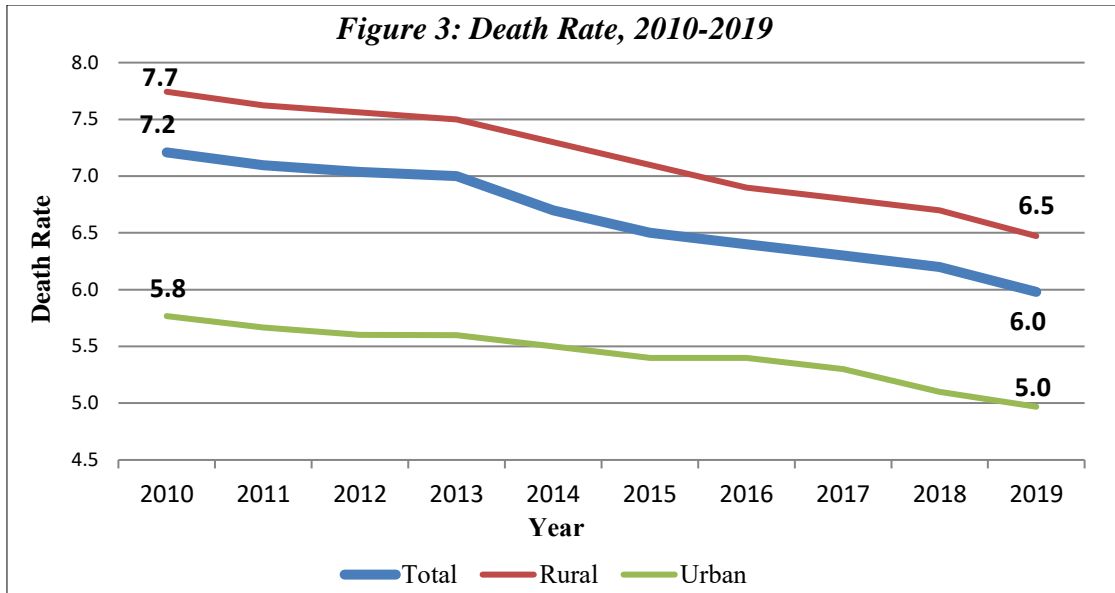

In 2019, Chhattisgarh has recorded the highest Death Rate of 7.3, whereas the lowest Death Rate has been recorded in Delhi at 3.2.

Death Rate

Mortality is one of the basic components of population change and the related data is essential for demographic studies and public health administration. Death rate is one of the simplest measures of mortality and is defined as the number of deaths per thousand population in a given region and time period.

The death rate of India has witnessed a significant decline over the last four decades from 14.9 in 1971 to 6.0 in 2019. The following *Figure-3* indicates that death rate at all India level has declined from 7.2 to 6.0 in the last ten years. The corresponding decline in rural areas is 7.7 to 6.5, and for urban areas it is from 5.8 to 5.0.

For the year 2019, the death rate for India varies from 5.0 in urban areas to 6.5 in rural areas. The death rate for the States/Union Territories ranges from 3.2 in Delhi to 7.3 in Chhattisgarh for 2019.

Infant Mortality Rate

The Infant Mortality Rate (IMR), which is widely accepted as a crude indicator of the overall health scenario of a country or a region, is defined as the infant deaths (less than one year) per thousand live births in a given time period and for a given region.

The present level of IMR (30 infant deaths per thousand live births, for the year 2019) is about one-fourth as compared to 1971 (129 infant deaths per thousand live births). In the last ten years, IMR has witnessed a decline of about 34% in both rural and urban areas. The *Figure-4* given below indicates that IMR at all India level has declined from 47 to 30 in the last decade. The corresponding decline in rural areas is 51 to 34, and for urban areas it is from 31 to 20.

Despite the decline in IMR over the last decades, one in every 33 infants die within first year of their life at the National level (irrespective of rural-urban). Among the States/Union Territories, the IMR ranges from 3 in Mizoram and Nagaland to 46 in Madhya Pradesh for 2019.

In 2019, the maximum IMR has been reported for Madhya Pradesh (46) and the minimum for Mizoram and Nagaland (3).

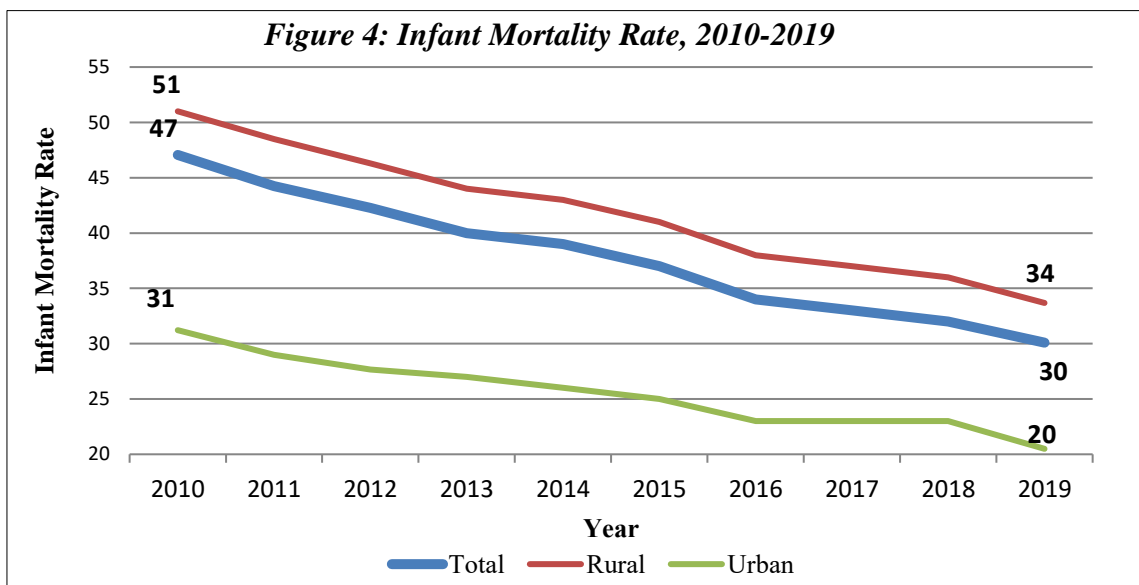

Table 1: Estimated Birth rate, Death rate, Natural growth rate and Infant mortality rate, 2019

India/States/ Union Territories	Birth rate			Death rate			Natural growth rate			Infant mortality rate		
	Total	Rural	Urban	Total	Rural	Urban	Total	Rural	Urban	Total	Rural	Urban
1	2	3	4	5	6	7	8	9	10	11	12	13

4. Daman & Diu	17	23	10						
5. Lakshadweep	8	11	5						
6. Puducherry	9	9	8						

Infant mortality rates for smaller States and Union Territories are based on three-year period 2017-19. On account of wide year-to-year fluctuations due to inadequate sample size, the infant mortality rate by sex, separately for rural and urban areas, is not given.

* Not Available as no infant death was recorded in the respective sample units for the year 2019.

Table 6: Number of sample units and population covered; India, States and Union Territories, 2019

India/States/ Union Territories	Number of sample units			Population covered (in'000)		
	Total	Rural	Urban	Total	Rural	Urban
